Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing, flap, aileron, and landing gear damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My wife and I had an appointment scheduled for 2 PM CDT on 27 April 2022. We planned to fly to the appointment in St. Louis in our Comanche N73T. Knowing that I had several obligations scheduled at work on the morning of 27 April, the night before I prepared the plane and rearranged the hangar so the Comanche was in front. On the 27th, I met my wife at the airport shortly before 1 PM EDT. I pulled the plane out and performed a preflight inspection. I do not recall checking that the baggage door was secure. We boarded the plane and departed from runway 23 at Hulman field about 1:20 PM. Shortly after takeoff I noted a higher than normal noise level in the cockpit, and determined the baggage door had come open. By the time I determined that it was the baggage door, there was not much runway left in front of me and I decided to continue the climb. I informed the tower that we needed to come back and land and was cleared for left traffic. I raised the gear and turned crosswind. On downwind, I noticed that the gear still indicated "in transit." Upon further investigation, I discovered that the landing gear breaker was tripped. I removed the cover for the landing gear emergency extension mechanism and the gear appeared to be up even though the up light was not on. I put the gear lever in the down position and reset the breaker. The gear extended (as indicated by the emergency extension mechanism) and the green down light came on. I flew the visual approach and touched down a little beyond the numbers. On roll out, the aircraft began pulling to the right. At first I thought we might have a flight tire, but then the right wing lowered onto the pavement. The aircraft skidded to a stop at the intersection of runways 23 and 32. I shutdown the engine and turned off the mags, master, and fuel. The time was about 1:25 PM. Neither my wife nor I sustained any injuries and there was no damage to anything other than our plane. The door was difficult to open. Assistance arrived and we exited the plane without help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Awaiting determination of the cause of the landing gear problem, so no recommendation at this time.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Mechanical failure in the gear system is suspected; however, further study by licensed mechanics will be required before that or a different cause of the gear problem and subsequent gear collapse can be concluded.
