Ref: N619AC Incident

Aircraft Located: AV Flight, 5410 Operations RD, Monroe, LA 71203

N619AC Owner:

R&M Aviation, LLC

Amarillo, TX 79116

This report is filed as required by NTSB 830. On May 15, 2022 approximately 2PM, N619AC SN# 421C0336 departed from Bastrop, LA KBQP airport and had difficulty keeping pitch control. In the first few minutes of flight the airplane diverted to Monroe, LA KMLU airport for a safe landing. Upon arrival/during post flight inspection a portion of the RH Elevator and Trim Tab were found to be missing.

Please find attachments including:

1. Overhead briefing – Aviation CMS LLC - Howard Penland – N619AC asset manager, Pilot/Mechanic. My base is Amarillo, TX phone [REDACTED]
2. Pilot statement – Floyd Houdashell – 30,000 hour pilot/mechanic phone [REDACTED]
3. Pictures (2) supplied to me
4. Logbook entry from Annual Inspection YR 2021
5. Excerpt from YR 2021 AD list related to YR 2016 Airworthiness Directive on Cessna 421 elevator trim systems
6. Logbook entry from maintenance event that occurred 4 flight hours before the Incident Flight on May 15, 2022

I look forward to working as Party to this event as the Owner's Representative. We want to see the part that fell from the airplane. We also need to work toward NTSB releasing the airplane so that work can begin on repair work or salvage as we need. Thank you for your aid in this process.

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

PILOT STATEMENT

Incident Report inflight Control Surface Failure N619AC. 421C. Ser# 0336. 13:15 Local time 15 May 2022

Aircraft made an intermediate fuel stop in KBQP. Aircraft was in route to another fuel stop planned at KMAI on a IFR Flight Plan. Immediately after takeoff from KBQP a loud pop was heard, and a violent oscillation of the control yoke began.

Landing gear was retracted to reduce drag. Due to the length of the runway at KBQP I decided to divert to Monroe LA, KMLU airport about 16 miles away for a much longer runway and crash and rescue personnel available. KMLU approach was contacted soon after the failure and an emergency was declared. Vectors were provided to the airport. We were handed off to the Tower about 9 miles out. The yoke oscillation continued until about a 3 mile final for runway 22 and then the oscillation quit and a normal landing was accomplished with a normal taxi to the ramp.

After shutdown, examination of the aircraft revealed that the elevator trim had disconnected from the trim actuator shaft, which may have allowed for flutter, which likely was the cause of the severe yoke oscillations. These yoke oscillations apparently continued until the right elevator separated from the aircraft. There were no personal injuries involving crew or passengers on the aircraft.

Floyd Houdashell
PIC of aircraft
