NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

- N210SD
- 5/18/22, around 4:00PM Mountain Time.
- Took plane out for a test flight after the installation of a new GPS.
- Flew for about 15 minutes.
- Lowered gear, saw mains and nose gear in place through gear mirrors, saw green light on landing gear light.
- Flew for about 5-7 minutes.
- Entered Left Base for 12R, switched to 12L.
- After landed was told by eye witnesses that the mains were dangling vs engaged in landing position when I was about to land.
- Settled down on the dangling mains and nose tire, and continued on runway for about 3,000 ft down centerline. The mains were pushed up into the wheel wells but remained about 3" below the fuselage of the plane and mostly kept the plane off the runway. Once I lost enough speed, I could not control the nose wheel any longer and turned to the right, exited the runway over the grass onto a taxiway.
- When the plane came to a stop, the plane leaned over on the pilot side and caused damage to the horizontal stabilizer.
- Gear breaker was not tripped.
- When we lifted the plane up to remove from runway, gear had no hydraulic pressure. Gear would not lock until they were pulled them forward manually and the battery was engaged. Then the landing gear locked into place with a green light.

RECOMMENDATION (How could this accident/incident have been prevented?)
