

RECORD OF CONVERSATION

Aaron M. Sauer
Senior Air Safety Investigator
Central Region

Date: 06/01/2022
Person Contacted: FAA Inspector Lorenzo Robledo
RE: CEN22LA204

Narrative:

According to Inspector Robledo, he and a mechanic performed an examination of the landing gear system after the airplane was recovered to a maintenance facility. Their initial examination revealed no anomalies that would have precluded normal operation. During their examination, they performed 10 landing gear extensions and retractions without any anomalies noted with the system. The cockpit landing gear light indications functioned during each gear cycle, and no leaks in the system were detected.
