

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

4 taxiway lights destroyed
Rt wingtip damaged. Outer rib damaged. L leading edge dented. L stabilator leading edge dented. L aileron damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

27 May 2022 Mishap

The Plan

At about 14:00 CDT I took off from 21D and flew to KMIC (Crystal Airport) to meet my instructor, Jeff Long, for a Biannual Flight Review. I executed a go around on my first landing attempt at Crystal because the tower had me spaced very close to the plane in front and it had not cleared the runway when I was on short final. I arrived at the meeting point at 14:30 and Jeff arrived shortly after. I had FAA Wings credits for all of the ground instruction needed for Basic Wings certification. I only needed to complete the "ASEL - Takeoffs, Landings, Go Arouns, Advanced Level" module to complete Basic - Phase 2 of the Wings program. This module covers emergency descents and takeoffs and landings (normal, cross wind, short field, soft field). KMIC was busy, so we decided to do the landings at Princeton (KPNM) which has a 3,900ft runway, 16/34 and two instrument approaches. Preflight information gathering included current and expected weather (Foreflight), NOTAMs and a briefing on the airport itself (runway orientation, length, approaches, etc.)

We departed KMIC from runway 14 and turned left to go north, climbing to 3000ft. On the way to PNM we did a simulated engine failure. I found a suitable plowed field to land in, got in a position to make a landing before ending the exercise. Winds at Princeton were reported 170deg at 6kts. For the landings at Princeton, we settled on the short field landing (no obstacles) first. We entered a normal left downwind for Runway 16.

The Landing

I extended the downwind a little bit because I planned to make a shallower than normal final approach. My touchdown aim point was given to me as the first line past the numbers. My normal approach speeds are 100kts on downwind, 90kts on base, 80kts on short final until I have the runway made, then slow to 70kts for flare. This time I was targeting 70kts on final and controlling altitude with power.

300 or 400 feet short of the runway, I got too low and began to add power, but not fast enough. The left wing dipped down and the right wing came up. I assumed that something on the left side of the airplane (wing or landing gear) caught one of the small tree/bushes though I never felt or heard any impact. We veered left significantly (between 15 and 30 degrees) and were just about to touch down before I got the wings level again. At that point, we were no longer pointed down the runway. I assumed we were contacting other vegetation as well though, again, I never felt or heard any impact. I also saw trees ahead of us and decided to keep the plane on the ground rather than try and do a go-around. I thought we might have vegetation clinging to the landing gear as well. We touched down short of the runway a little to the left and pointed left. We struck four taxiway lights as we crossed the parallel taxiway. We rolled up over a small berm. I continued to steer the plane a bit left to avoid the trees ahead. We came to rest about 100yds left of the runway.

The engine was still running when we stopped, I shut down the engine, turned off the magnetos, (put the key on the dash), turned off all electrical switches, including the master switch, and set the fuel selector to off.

Post Landing

Neither I nor my passenger were injured in any way. We had not struck anything bigger than a taxiway light. I cleared the debris from the taxiway lights off the taxiway. We took pictures and walked the path the airplane took. We found one bush/tree that was sheered off at about 5 feet. I don't know if that was the first one I hit or not. We found the touchdown point in the dirt about 50ft from the threshold and to the left of the runway and traced the path the plane took to stop.

We found no vegetation other than grass attached to the plane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

27 May 2022 Mishap

The Plan

At about 14:00 CDT I took off from 21D and flew to KMIC (Crystal Airport) to meet my instructor, Jeff Long, for a Biannual Flight Review. I executed a go around on my first landing attempt at Crystal because the tower had me spaced very close to the plane in front and it had not cleared the runway when I was on short final. I arrived at the meeting point at 14:30 and Jeff arrived shortly after. I had FAA Wings credits for all of the ground instruction needed for Basic Wings certification. I only needed to complete the "ASEL - Takeoffs, Landings, Go Arouns, Advanced Level" module to complete Basic - Phase 2 of the Wings program. This module covers emergency descents and takeoffs and landings (normal, cross wind, short field, soft field). KMIC was busy, so we decided to do the landings at Princeton (KPNM) which has a 3,900ft runway, 16/34 and two instrument approaches. Preflight information gathering included current and expected weather (Foreflight), NOTAMs and a briefing on the airport itself (runway orientation, length, approaches, etc.)

We departed KMIC from runway 14 and turned left to go north, climbing to 3000ft. On the way to PNM we did a simulated engine failure. I found a suitable plowed field to land in, got in a position to make a landing before ending the exercise. Winds at Princeton were reported 170deg at 6kts. For the landings at Princeton, we settled on the short field landing (no obstacles) first. We entered a normal left downwind for Runway 16.

The Landing

I extended the downwind a little bit because I planned to make a shallower than normal final approach. My touchdown aim point was given to me as the first line past the numbers. My normal approach speeds are 100kts on downwind, 90kts on base, 80kts on short final until I have the runway made, then slow to 70kts for flare. This time I was targeting 70kts on final and controlling altitude with power.

300 or 400 feet short of the runway, I got too low and began to add power, but not fast enough. The left wing dipped down and the right wing came up. I assumed that something on the left side of the airplane (wing or landing gear) caught one of the small tree/bushes though I never felt or heard any impact. We veered left significantly (between 15 and 30 degrees) and were just about to touch down before I got the wings level again. At that point, we were no longer pointed down the runway. I assumed we were contacting other vegetation as well though, again, I never felt or heard any impact. I also saw trees ahead of us and decided to keep the plane on the ground rather than try and do a go-around. I thought we might have vegetation clinging to the landing gear as well. We touched down short of the runway a little to the left and pointed left. We struck four taxiway lights as we crossed the parallel taxiway. We rolled up over a small berm. I continued to steer the plane a bit left to avoid the trees ahead. We came to rest about 100yds left of the runway.

The engine was still running when we stopped, I shut down the engine, turned off the magnetos, (put the key on the dash), turned off all electrical switches, including the master switch, and set the fuel selector to off.

Post Landing

Neither I nor my passenger were injured in any way. We had not struck anything bigger than a taxiway light. I cleared the debris from the taxiway lights off the taxiway. We took pictures and walked the path the airplane took. We found one bush/tree that was sheered off at about 5 feet. I don't know if that was the first one I hit or not. We found the touchdown point in the dirt about 50ft from the threshold and to the left of the runway and traced the path the plane took to stop.

We found no vegetation other than grass attached to the plane.

The aircraft was about 100yds left of the runway and pointed about 30 degrees left of course.

I briefly turned the master switch and avionics back on to check to use the radio to check to see if the ELT had been activated. It had not.

We called the airport manager and he came out and gave us the name of someone who could move a damaged plane. A town police officer also came out and took a statement.

Notes

I know this airplane can develop a high rate of sink at low airspeed. I commented before the maneuver that I don't like to fly it much behind the power curve. The peak of the power curve is about 90kts.

I do not recall hearing the stall warning horn during the mishap. I very rarely hear the stall warning horn in that plane during landing.

I found the nose high attitude on final a bit disconcerting. The long nose nearly blocked my view of the runway. Usually the nose is not that high until I flare.

I believe I was at about 70kts when I first contacted the trees/bushes, but I don't know for sure. The instrument panels in our club planes had recently been upgraded to Garmin G3 glass panels. I have about 10 hours flying time with the new instrument layout. The airspeed indicator is a tape on the left of the attitude indicator. Most of my life I have flown with a dedicated airspeed indicator with a needle on a round dial. It still takes me a fraction of second more to find my airspeed with the new instruments than with the old ones.

The weather was good; about as good as you can get for flying. There was a light wind with a very small crosswind component from the right. Examining the AWOS after the fact, it seems that there was a gust of wind to 14kts. just about the time we landed. That could have been what lifted the right wing and not so much the vegetation catching the wheels. Had I known that for sure, my response would have been different.

My list of possible contributing factors:

Executing a maneuver that I don't do very often.

Not picking a touchdown point further down the runway.

Getting too low and slow on final approach

Tall brush in the runway safety zone

New (10 hrs) to glass panels

Unexpected wind gust.
