NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Looking back, I made a bad read on my altitude which prevented me from landing on the runway. I thought I was too high, and purposely tried to lose altitude on the downwind. I should have held on to that altitude. I feel that the width of the runway fooled me. I am used to 100ft wide runways so the 50' wide runway made me feel high. When I turned final in to that strong headwind, I knew I was too low and with no power to add I had to find option B.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine failure. I believe I lost a cylinder but have not heard back from anyone.

Damage to Aircraft

Nose gear, starboard wing and landing gear, propeller, under belly of fuselage.

Flight History

Departed KPPA at approximately 1:15PM CDT. Climbed to 9500 ft MSL. Weather was clear, with strong winds out of the south, 30-50kts. The flight was unremarkable for the first 2 hours.

Around 3:10 PM I noticed a small drop in manifold pressure and bumped my throttle a little to adjust. A few moments later I noticed the same thing, then I noticed a strange smell accompanied by a sensation of heat around my ankles. At this time I became concerned and told ATC that I was going to descend. I did not see any smoke, but felt something was not right and wanted to be closer to the ground if I needed to land. At this point I did not see any abnormalities in temperature, or oil pressure. I descended to around 5500 ft then I heard a loud, jack-hammer like sound coming from the engine with a very strong vibration shaking the hood violently. My first concern was the risk of a fire, so I cut off the fuel flow and feathered the prop. I advised ATC that I lost my engine. Then I setup a glide and looked for a landing site. I found TE84 on my foreflight app and advised ATC that I would land there. They asked for my cell phone number in case of communication issues.

I was very close to the airport and turned to setup an approach to 17. On the downwind, I looked at the runway and felt that I was very high, so I began a fairly quick decent. As I turned base I realized the wind was pushing against me and shortly after I turned final I could see that I was not going to make the runway. It was set up on a rise and with the stiff headwind (20+kts with 30+ gusts) I was going to crash into the small trees/brush on the side of the rise. Off to my right I saw a small hill with a lower elevation pasture on the other side, so I turned right and waited until I cleared the hilltop to put my gear down (very tight). There were only a few seconds between clearing the hilltop and landing in pasture. I did not have time to look for gear indications so I can't tell you if the gear collapsed due to a hard landing or if only the port side gear locked and the others were still in transit when I set it down. Either way the aircraft skidded to a stop on an uphill sloping, grassy pasture. There was no damage to the property. After I exited the plane I phoned ATC and let them know I was ok, but the plane was damaged.
