Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage on left wing, left landing gear, fuselage and propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The winds reported 010 at 7 knots with thunderstorms in the vicinity. The approach was relatively stable towards the runway despite some significant (convective) thermals and downdraft. The left wheel touched the runway first as the airplane was banking slightly left. The initial touchdown on the left wheel can be described as rather rough as result of a downdraft. The airplane bounced and I applied some back pressure to catch the next transition. The moment the left wheel touched the runway for the second time, the airplane aggressively jerked towards the left. I responded by applying right rudder and full power to go around. From that point I am not able to give an accurate description of what happened as I instantly found myself in a rather violent and confusing environment for a couple of seconds. After the airplane came to a stop, I pulled the power back, turned off all switches and ignition and closed the fuel valve. I debarked the airplane through the right door and distanced myself from the airplane.
