

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Gladewater State: Texas
 ZIP: 75647 Country: US
 Latitude: 32.53N Longitude: 94.97W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 06/09/2022 Local Time: 1353
mm/dd/yyyy Time Zone: CDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N364AM

Manufacturer: Aircraft Manufacturing and Development

Model: Alarus CH2000

Serial Number: 20158

Year of Manufacture: 2005

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1692 lbs

Weight at Time of Accident/Incident: 1530 (approx) lbs

Number of Seats: 2 Flight Crew Seats: _____

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Witness statement regarding aircraft accident - N364AM at Gladewater Municipal Airport
June 9, 2022.

Background

I witnessed the full accident involving N364AM on June 9, 2022. I am the Certified Flight Instructor who operated and instructed in this aircraft, and have owned N364AM since 2005, when purchased new at the factory. The student pilot flying at the time of this accident, Mark Brundige, is my student. Mr. Brundige has completed almost all of the Part 61 private pilot training requirements prior to taking a practical test for certification, lacking only a few hours of required PIC/solo time. The flight on June 9, 2022 was undertaken, approved by me, in order to meet the training requirement.

Mr. Brundige departed 07F at approximately 1320 CDT. He flew in the airspace around 07F for approximately 30 minutes and returned to the traffic pattern at 07F, for a full stop landing, I believe.

Observation of accident

By monitoring the student's progress on ForeFlight and Flightaware in my building at 07F, I knew that Mr. Brundige was returning and began to monitor Unicom at 07F. When I heard appropriate radio calls for final approach, I left my building to watch Mr. Brundige's approach and landing.

The approach appeared normal in all aspects and, in fact, appeared not only stable but on speed and with excellent alignment. Upon touchdown, the aircraft 'bounced' once, had a second touchdown with a more pronounced nose up bounce following - appearing to begin 'porpoising.'

I heard full power being applied, thinking the pilot decided to 'go around,' but an even further nose-up pitch also accompanied power application. The airplane appeared to stall at no more than 10 feet above the runway, the left wing dropped, struck the runway, and the airplane struck the ground nose down, turned approximately 90 degrees to the east from runway heading. A GPS recording of the flight showed the time of impact at 1353 CDT.

I immediately hurried to the crash (as did as some others visiting the airport, people who I do not know) to check on my student, finding him minimally injured - with some abrasions, contusions but otherwise intact and fully conscious. (Cursing loudly, in fact.)

Nils S. Erikson, MD

[REDACTED]

[REDACTED]

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Correcting poor execution of attempted 'go-around' remains a difficult task for instructors. The required physical responses are almost all 'counter-intuitive' (lower pitch for airspeed, rudder to correct yaw/turning). Although these maneuvers were reviewed with the student at altitude, overcoming the urge to react incorrectly in an actual event can easily overpower training and recall. Practicing 'bounced landing' and 'go around' after landing in flight, at airport surface seems risky. Perhaps simulator training could augment correct response, but the lack of physical forces in such a scenario with a BATD make this questionable.

I believe the deployment of airbags lead to the remarkable lack of injury in this accident.
