Subject: Flight School Information

Mike

As discussed on the phone I spoke with our maintenance personnel and based on their opinion the sound was undetermined.

When I spoke with the student he could not identify what the sound was.

I did talk to an instructor that flew the aircraft early in the day and he did express that he heard what he thought was a shimmy dampener on landing.

respectfully,

Aaron McCary
Assistant Chief Flight Instructor/Safety Coordinator
Kansas State University Salina
Aerospace and Technology Campus
