Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

There was a propeller strike on the ground which will require repairs but I am unsure on the cost associated with that repair.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of 6/21/2022 I was planning on finishing up my solo flight hours at KFCM for my private pilot license. After looking at aviationweather.org my instructor and I determined it would be a good morning with low winds for me to finish up my solo hours. I was scheduled for the aircraft from 0700-0900 and probably got in air around 0730. When I obtained the ATIS it was information bravo and wind was 200 at 3kt and altimeter was set to 29.88 and I was directed to runway 28r to make a lap in the pattern. I took off and was in a normal traffic pattern for runway 28r which is to the right as there is a parallel runway 28L. On final things were still going well as I was tracking centerline all the way up until touchdown. Right as I entered ground effect is when the aircraft yawed to the left which is when it side loaded. For a brief moment when it touched down side loaded I started to initiate a go around but quickly realized that would have made things end significantly worse so returned to power idle and that is when the aircraft had the prop strike and went off to the left of runway 28r into the grass ditch. I immediately called my instructor and then ATC to let them know I was ok but the aircraft would need a tow.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Spending more time in training on late go arounds and more time understanding how CG affects the aircraft while on ground. Since this incident I have gotten up with the lead instructor at my flight school(Jeremy) and have done a lot of work with more rudder work and understanding how to keep the CG more stable while in a taxi. We think that one of the problems is after touchdown I didn't maintain enough back pressure and started to apply the brakes which both brought the cg forward which is where the propeller strike occurred.
