

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Harrah State: OK

ZIP: 73045 Country: United States

Latitude: 35.5398508 Longitude: -97.2015719

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/01/2022 Local Time: 3pm
mm/dd/yyyy

Time Zone: Central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N6147T

Manufacturer: Cessna

Model: 150E

Serial Number: 15060847

Year of Manufacture: 1964

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1600 lbs

Weight at Time of Accident/Incident: 1500 lbs

Number of Seats: 2 Flight Crew Seats: _____

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine pushed back, firewall buckling, nose strut canted forward. Large dents in both wings from trees, front spar on left wing bent. Minimal damage to trees at end of field, tore hole in barbed-wire fence.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At around 1pm Central Time, my student and I were preflighting the Cessna 150, N6147T, and I was considering how much fuel to take. I didn't have a lot of experience on this shorter grass runway, and it was a hot day. After double-checking the performance figures in the POH I decided on 12 gallons of fuel to stay as light as possible. We were taking off and heading to Shawnee airport to practice landings. We took off from Oklahoma Academy at 1:25pm and went and did some pattern work at Shawnee. I got into training my student and forgot about the fuel. After some pattern work, I decided to take my student over to the shorter strip at Oklahoma Academy, and begin working on the pattern there. On the way, I noticed the fuel gauges seemed low. They do bounce around a bit, and, to be transparent, somewhere along the line someone told me "fuel gauges are only required to be accurate at empty or full", and I had never fully trusted the fuel gauges. I trusted good planning, good habits and checking the dipstick often. Even so, noticing they seemed low should have reminded me that I had planned to get fuel and had not, but I was involved in training, and it did not. After a couple of missed approaches, the engine began to sputter and we had difficulty climbing out of a missed approach. I took control and attempted a turn-back. Unfortunately, I was too fast (the tailwind didn't help), and I elected to put in power and hope for enough altitude for one more turn-back. We climbed a little and the engine cut out. I turned toward the nearest farmer's field in my path and we had a forced landing. It went as well as a forced landing could go, I suppose, and we lost enough momentum that by the time we hit the trees, the airplane and seat belts were able to protect my student and I from injury.

The terrain appeared to be a recently plowed field, dry but soft. The airplane came to rest at about (35.5398508, -97.2015719). I did not know it at the time, but I hit a barbed-wire fence where the field joined the one before it. Others came to help us and we pushed the airplane back to our airstrip. We spoke to the owner of the field, and they weren't concerned about the field, just happy everyone was OK.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

From Pilot: Normally I would say, before going on a training flight, make sure you have enough fuel and an hour reserve, or if you are going cross-country flying, plan your fuel stops and alternate airports with fuel services available during the hours you will be in the area. Even if you do an abbreviated preflight of the airplane, dip the tanks and check the oil at each stop along the way - I've had fuel or oil caps come loose or left loose. As an additional precaution, even if you are just going for a one or two hour flight, take full fuel if it's an option. This was a somewhat unique situation for me - taking off for a short training flight with less than enough fuel to complete the flight. It should have registered with me to leave a sticky note on the dash or set a timer on my phone as a reminder, since we were just doing pattern work at a nearby airport and wouldn't normally be pulling onto the ramp. Also, when I noticed that the fuel gauges seemed to be low, I should have made plans to land asap and check the tanks. My biggest take-away from this experience is this: Establish good habits that will keep you safe while flying. If you are going to depart from your normal habits (say, to take off light), put a note on the dash, set an alarm or otherwise make an obvious reminder to yourself that your normal safety precautions are not in place. If your gauges seem low, land and confirm with the dipstick that nothing is amiss.

One more note: I had been out of the seat for a while before I attempted this flight instruction. Yes, I had a current flight review, and yes, I had renewed my CFI license through an on-line course. However, in 4 years I had only had 7 hours of flying, and my flight review and CFI renewal were due in less than two months. The training environment that I elected to go into was significantly more challenging than my previous ones, with a 1400' grass runway. I noticed that I was making some dumb mistakes prior to the accident. I should have stepped back and recognized that I was out of practice and I should have taken the time to get more training and/or move the planes to an airport with a longer runway and do training out of there.
