NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N7119 departed KRWL at 09:30 on July 20th on a flight to KGRN following a stop for fuel with approximately 24 gal onboard. The flight plan was to fly direct to KGRN at approximately 3,000' AGL. KRWL weather was clear below 12,000' with a westerly wind at 10-15mph. KGRN AWOS was reporting clear skies with winds 240-270 at 12-14mph. Approaching the vicinity of KGRN the AWOS was checked and reported winds 270 at 14 mph gusting 18-20 mph. Runway 29 was planned for, based on this report. On the left downwind leg for runway 29 the midfield windsock confirmed that the wind was approximately 270 and favoring runway 29. A left hand pattern, standard for KGRN, was flown. On the final leg for 29 gusty winds, consistent with the AWOS, were experienced but only had a slight crosswind component that was easy to compensate for. Due to the gusty conditions and crosswind component a tail low wheel landing was performed. Flare and touchdown were uneventful. Shortly after touchdown while lowering the tail to the runway a strong gust from approx 240 hit. The plane quickly slewed to the left despite aggressive right rudder. The slew was checked with hard right rudder and right brake but the plane continued on a heading of approx 250 toward the left side of the runway. Both brakes with hard right rudder were now heavily applied as the plane left the runway. As the plane left the runway into the dirt the tires dug in, I was unable to keep the tail down and before I could release the brakes the plane nosed over onto its back impacting a runway light.

No one was injured other than some minor cuts. Power and fuel were shutdown and the plane was evacuated. No significant fuel was leaking. There was approximately 5 gal remaining in each wing fuel tank. The plane had come to rest on it's back approximately 45 deg to the runway edge with it's right wing tip on the runway. The EPIRB was shutdown and removed from the plane. Local citizens who saw that a plane was off the runway stopped to assist. The Airforce SARSAT office called and were informed a hard landing had occurred and no assistance from them was needed. Local police and the airport manager, also having received a call from the Airforce, arrived shortly to assist.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have eased the brakes and let the plane run off into the grass before trying to stop it.
