N442JE Crash Statement

On the Morning of 7/22/2022 I was entering my second spray pass of fungicide in a Corn field in Waterloo Illinois in Robinson R44, When the Collective flight control stiffened to a point that the approach to the spray line and the descent rate were unable to be arrested at which point, I used the cyclic flight control to flare to slow the helicopter and arrest the descent but the both flight controls offered the same resistance. I attempted to recover but never regained the hydraulic assistance to assist in the flight approach. At that point I was flying at a ground height until the climbing ground and the skids of my helicopter contacted the ground causing a nose over rollover at which point the main rotor contacted the ground inducing a rotating cartwheel coming to rest on the passenger top side of the helicopter facing the opposite direction.

The helicopter was 15.6 hours until the next hundred hour due. It had a simplex spray system installed with approximately 40-45 gallons of chemical and around 10 gallons of helicopter fuel.

I Have approximately 9600-10000 hours of flight time in helicopters. Most of which is in Robinson helicopters

I also have around 1600 hours spraying and at least 95 percent of my helicopter time is low level with approximately 270 hours flown in the last 90 days.
