Description of Damage to Aircraft and Other Property (Use additional sheet if necessary) 700 Vertical and Rudder ripped off on wire impact. Then on landing it was ground looped an rear fuselage was bent 180°			
NARRATIVE HISTORY OF FLIGHT (Please type or print in ink) Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. First spray job of the day. I decided on one end of the field I could go under the wire. On the 5 pass and the 2 time going under one wire dropped down more than the rest once I noticed it was too late to pull up. I stuck the wire but managed to fly the plane back to our home Airport (1725). The wire busted the front windshield's out an tore off the rudder so I had no directional control. Once I managed to get the plane to the ground it landed very nice but took a hard turn to the left and ground looped. I followed ^{performed} all the necessary procedures for the incident and got out the airplane to meet with helping crew members.
