ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

After landing I asked a company mechanic to inspect the left landing gear. No damage was observed to landing gear. The damage to the aircraft was not discovered until a much more detailed inspection was completed. It was about one week after the landing that the substantial damage was discovered. The aircraft did not fly after the hard landing was reported by the pilot. This aircraft was being used as a trainer by Lake Clark Air. Also the aircraft had a high amount of total time on airframe and engines. The aircraft was not being used as an air taxi aircraft but only for training and non revenue flights.

I did a detailed preflight to the aircraft before the flight to Port Alsworth. It is very possible that the damage would not have been discoverable by a detailed preflight.

It is possible the damage found a week after the hard landing existed before that day's flight. This aircraft was flown by many pilots with limited experience.

As a safety conscience pilot I did immediately report the hard landing to a qualified company aircraft mechanic for inspection.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
