Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft damage: both wingtips and the left wing root are cut open. Damage to the spinner and a slightly morphed propeller. Property damage: minor damage to metal wire fencing on the outskirts of the Sparta airport property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I got to the airport in the morning around 10 AM EST. On the car ride to the airport, I remember thinking it was going to be a beautiful day to fly and go for a joy ride along the Michigan lakeshore (and back to the Sparta airport) with my friend and his teenage son and teenage niece. We ended up leaving my friend behind to wait at the airport and only taking the two teenaged kids for weight and balance calculations. The airplane was already fueled up to tabs (about 36 gallons of 100LL) due to a flight instructor filling it up prior but he did not end up using any of it due to the 8 hour flight instructor flight training rule. After doing a preflight, my two passengers and I got in the airplane. [REDACTED] sat in the back row on the right, [REDACTED] was up front in the right seat, and I was up front in the left pilot's seat. After starting up the airplane, I got the weather and taxied to runway 25, which was the current runway in use and was favored by the winds. I pulled to the side and did the runup. After the runup, I lined up with the runway and pushed in full throttle. I did my regular call outs (temperature and pressure in the green, airspeed alive) and then rotated at Vr 55 kts. After liftoff, we were not getting the airspeed that we needed to climb out at Vy, so I pushed the nose down to accelerate to Vy in ground effect but at that point, we were rapidly running out of runway ahead of us and the trees were rapidly approaching. We did not have the altitude to clear the trees and we still had not reached Vy so I aborted the takeoff. I pulled power and pushed the nose down so that we did not stall and landed back on the runway. When coming back to land on the runway we remained in ground effect before it touched down, presumably due to the fact that when I pushed the nose down after pulling the power we also gained airspeed. After touch down I remember seeing the opposite runway's numbers and then the grass. Additionally, after touch down, I immediately applied full toe brakes and aerodynamic braking with the yoke but the airplane kept rolling. We rolled off the runway into the grass down a hill and finally stopped when we contacted the fence. We immediately exited the aircraft and I shut everything down.

Everyone was able to walk away from the aircraft without any injuries. The airplane did not appear to have any signs of smoke after the accident.

Circumstances leading to the accident: density altitude, aircraft near max gross weight, small margin between the altitude to clear the trees and the tree height, upsloping runway
