

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Onalaska State: Texas

ZIP: 77360 Country: USA

Latitude: N 30 46.2 Longitude: W 095 07.3

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 08/09/2022 Local Time: 1715
mm/dd/yyyy

Time Zone: CDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N830DA

Manufacturer: Air Tractor

Model: AT-802A

Serial Number: 802A-0930

Year of Manufacture: 2022

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 16000 lbs

Weight at Time of Accident/Incident: 11540 lbs

Number of Seats: 1 Flight Crew Seats: 0

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☐ Normal

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

Several TFRs had been issued for the fires we were working between Groveton and Corrigan, Texas. Immediately after takeoff from KLFLK, we were in communication with the ATGS (Air Attack) that was controlling the air assets engaged in the firefighting operation.

 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft sustained substantial damage, and since it became submerged, it was considered a complete loss.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were dispatched to the Polk 4754 fire between Groveton and Corrigan, Texas. I was flying Fireboss 218 (N830DA) as dash two of a three plane formation with 201 (lead) and 246 (dash three). As we launched loaded with water, we proceeded to the fire for our first drop, then went to Lake Livingston to scoop water. Our normal procedure was to reconnoiter the scoop site with one aircraft at low altitude and at least one wingman at a medium altitude to check for obstacles and to try to gauge water depth. The conditions were very good for scooping in a southwesterly direction. Our recon saw a large stump at our projected entry point so we planned to land long of that point. On the first scoop, lead saw a second smaller stump to the right of the large stump at the entry point so he called it on the radio so two and three could avoid it. Also during the first scoop, I saw a moored paint can as I lifted off that was difficult to see due to the color. I alerted dash three on the radio and he acknowledged. It is not very common to find obstacles mid-scoop, but sometimes we do and avoid them as we did. Lake Livingston was not unlike any other scoop site in that regard. We scooped 7 times and then were directed by the ATGS (Air Attack) to fuel and return so we proceeded to Angelina County (KLFK) for fuel.

After launching from our refueling at KLFK, we checked in with the Air Attack and then proceeded back to Lake Livingston for water. We did another reconnoiter of the water as it seemed the wind had shifted. Indeed the wind was strong out of the southeast (flags were seen standing straight so it was estimated to be at least 20 knots) and the water looked rougher than our previous session. But we all three [pilots] agreed that it looked workable. We knew the locations of the two large stumps from the previous cycle and didn't see any other obstacles down line so planned our entry accordingly and proceeded.

The approach and touchdown were normal but the water was much rougher than it appeared from above and much rougher than the first fuel cycle - very choppy. The chop made it very difficult to scoop so I decided to abort the run very early because it was so rough. I did not jettison what water was taken in because I thought it would have been an insignificant amount, there was so little actual scoop-water contact time.

I raised the scoops while trying to keep the nose straight and properly gauge the chop, still being solidly on the water, not yet transitioning to flight. I continued adding power and pushed right rudder to respond to what I believed was a large demand when the nose veered left uncontrollably and the airplane spun almost 180 degrees, the rotation being almost completely around the vertical axis of the airplane. The stall warning indicator never activated and there were never any indications of a stall. The floats departed the airplane while the rest of the airplane came to a stop in the upright position.

Once movement stopped I egressed into the water and swam away from the airplane. I was intercepted and recovered by a civilian boat and taken to a boat ramp at Onalaska, TX.

There were no outstanding gripes on the airplane and it underwent a 100 hour inspection several days earlier. The scoop accumulator had also been pressure-checked within the last 21 days.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It is still unclear to me as to what caused the uncontrollable yaw. If an obstacle hidden in the chop struck one of the floats and compromised it, there may then have been a very large asymmetric drag component. We have had similar situations with scoops deploying asymmetrically, creating other large yaw excursions. In this case, the prudent choice, given the obstacles that were difficult to see during the first fuel cycle under ideal conditions, would have been to find a different water source. With degraded conditions, the chop would have made it very difficult to see any additional hidden hazards.

If the choppy conditions made directional control difficult or even impossible, it would seem that there would have also been a [large] pitch component to the excursion, causing the airplane to cartwheel or flip on its back. While that did not happen, the prudent choice would still have been to find another water source with calmer conditions.

Both of these solutions, while valid, are operating with the benefit of 20/20 hindsight. Scooping operations are extremely dynamic and rarely can be constrained by limitations used to cease operations in other areas of aviation. As mentioned, the site appeared to all three pilots to be workable the second time from the air, even though it was not. Also, given the nature of firefighting operation(s), when fire threatens urban (and suburban) areas, the desire to complete the mission often does not receive properly scaled filtering.

☐ Automotive

☐ Other, specify _____

Other Services, if Any, Prior to Departure**EVACUATION OF AIRCRAFT**

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

I opened the left window (the normal point of entry and exit), unstrapped, disconnected my communication cord, then stepped onto the window frame (again, the normal method). I inflated my PFD and then swam away as the plane was almost completely submerged at that point.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)

Aircraft Registration Number

Manufacturer: _____

Model: _____

Damage to Other Aircraft

☐ Destroyed

☐ Substantial

☐ Minor

☐ None

Registered Owner of Other Aircraft

Name: _____

City: _____
