Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Wings both damaged. have to replace both wings. Fuselage not damaged. Tail not damaged. Prop damaged, Gear is good. It did break gear bolts on right gear, but gear is still good.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of August 10, 2022, I arrived at KAQP airport to go to work crop spraying in N73194 aircraft. It was a foggy morning so it started out having a pilot meeting about what fields we were going to spray that morning. After the meeting I went out to the hangar to pre flight my aircraft N73194. Everything checked out so I then went to the pilots lounge to rest and waited for the fog to lift. By 8:00am the fog had lifted and the loaders had my plane loaded. I taxied out with my first load. I checked the AWOS at KAQP and it was 040 to 080 at 4-6 kts, temp 65 so I taxied to runway 13 for takeoff and stopped at the beginning of 13 to do my take off check list. Everything looked good and I took off no problems. I returned at 9:10am for my second load, landed into the wind on 04 sod runway at KAQP. I taxied to the hangar to get the second load. I got the load, put on 336 gallons of product and water and 100 gallons of fuel. I taxied to runway 13 again. While taxiing to runway 13 I noticed the wind sock blowing more N to NE 360 to 040 indication, listening again to AWOS and it said 080 at 8 kts, so I used the AWOS as my primary source of weather and wind information. This was at about 9:25am. I did my take off list again and everything checked out good. I applied power and RPM full, started rolling down runway 13 with 10 degree flaps in place. I noticed my takeoff roll was longer than usual. I had my control stick all the way back and to the left into the wind until 60MPH, I then started applying forward stick pressure and as soon as I did that the aircraft veered to the left off the runway on the grass. I tried to stay next to the runway while aborting the take off as the aircraft started slowing down it wanted to whether vane back to the left into the wind. There was a ditch that runs parallel with the runway that it went into and damaged both wings, prop and broke bolts off of the right gear. I was uninjured.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Don't believe AWOS of departing airport if you can get a visual on wind sock.
