N1815J Accident statement/ Reoccurrence preventions procedures

N1815J Aug 24th incident by Sebintu M. Elisha

I Sebintu M. Elisha was with my Student Pilot Jean-Mark M. Sankara. We took off and headed to KMKC and was working on take-off and landings. After student's success we headed back to our home base airport (KONO) where we were supposed to continue with touch and goes. At this particular take-off we settled for short-field. The plane started moving and I started checking for the rotation airspeed. I noticed that the speed wasn't rising, double check in the cabin for right settings and listened for any sign of mechanical malfunctions. The plane felt to have enough lift but the speed still wasn't moving. The speed eventually started moving. I thought about aborting the take-off but I thought, with the left distance I'll have to brake hard. With the possibility of the plane flipping over when hard braking, I decided to rotate. The engine had full power and I decided to keep it that way because I thought we was going to barely touch the trees and continue. Before contacting the trees I reduced the angle of attack (to prevent a stall) and banked little bit to the left trying to go through the opening. When we contacted the trees, the left wing got cut and separated from the aircraft. The next thing we noticed was both of us trying to escape from the demolished inverted aircraft.

As far as a suggestion for preventing reoccurrence goes, as a pilot, I will closely check the weather and since there is not an exact way to know the actual at this airport, I will always use the whole runway. And by the way, when I first got to that airport (RoosterVille airport (KONO)) I noticed that the trees were growing taller and taller and almost broking the approach end of both runaways (18 and 36). I brought it to the attention of airport management and other pilots but I was told that nothing can be done since the trees are privately owned and that it's owner doesn't want to trim them down and/or won't even sell the area. I plan on moving to the nearest safer airport and train there. Lastly, as one of the DR.SE Flight Services base airport requirements, the airport must have AWOS or ASOS so both students and CFI keep tracking the weather (density altitude) changes through out the flight.
