Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The prop struck dirt and is curled up. The exhaust can appears to be buckled. Unknown damage to the engine. Multiple dents in the paneling around the engine. Aircraft hopper and hydraulic gate damaged. Transland spreader that was attached to the aircraft was bent in multiple places and partially detached from the belly of the aircraft. Clear canopy of the cockpit was broken out, along with cracked cornering windshields. Door windows are broken. Fuselage is bent at a 90 degree angle from the airconditioning unit behind the cockpit clear back to the rutter. Tail wheel broken off. Rutter and horizontal stabilizers are completely destroyed. Lefthand wing has extensive damage to the wing tip. The fiberglass is split open and twisted on the wing tip. The aileron and flap on the lefthand wing are damaged. Drop boom brackets are folded up under the wings. The righthand wing has some damage to the wing tip. Aileron on the righthand wing has some damage; it is unknown if there is damage to the righthand wing flap.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

For reference: Nolte Farms Airport (NE82) is the pilots personal registered strip. It is a grass runway with crops planted around it.

On 8/25/2022 around 6:00a.m. CST there was light rain in the area of Nolte Farms Airport (NE82). The light rain cleared around 8:00a.m. CST. Around 10:00a.m. CST the pilot took off from Nolte Farms Airport (NE82) to began cover crop applications for a customer. After the first load of cover crop had been applied to a local field and the hopper was empty, the pilot flew back to land at Nolte Farms Airport (NE82). The pilot began to land the aircraft. The main gear and tailwheel had all touched down on the grass strip and the aircraft was beginning to slow. The pilot needed to use the brakes to steer the aircraft, but the grass was still damp from the light rain that had occurred earlier in the morning and when the pilot tried to use the brakes on the aircraft it began skidding towards the cornfield that was located directly to the east of the runway. The right wing caught the edge of the corn field and this caused the aircraft to start ground looping. The tailwheel was locked at the time of the landing and when the aircraft began to ground loop it caused the locked tailwheel to break off and jam the tailwheel spring into the ground. With the tailwheel jammed into the ground there was still enough momentum that the rear of the fuselage behind the cockpit broke off. This caused the aircraft to gently roll over on its top on the edge of the corn field. The pilot was able to exit the aircraft without injury by opening the door and climbing out.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident could have maybe been prevented if the grass was dry at the time of landing.
