Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to both wings, empennage, tail, horizontal stab, engine, windscreen, engine/propeller, and landing gear carriage. No damage to any other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot started aircraft and conducted pre-flight checks uneventfully; the time was approximately 1500 and the aircraft was eventually desitned for Fairbanks International Airport. Pre-flight weather called for winds 5-10 knots from the south; winds encountered upon arrival were approximately 30-40 knots gusting from variable directions. Pilot initiated takeoff roll, raised the tail, and rotated normally for a high-wind scenario. Upon rotation and acceleration the pilot applied corrective inputs to counter significant gusts during the initial climb. Upon passing the tree tops at about Vx the aircraft encountered a wind shear that, despite full control inputs to counter, put the aircraft in a right bank and nearly stalled the aircraft. After crossing the treetops and now in a high tailwind low altitude and IAS scenario the pilot attempted to level the wings and reduce sink rate for impact with the terrain. Upon impact the pilot continued to keep the wings level until the aircraft came to a stop, the pilot then made a final radio call and shutdown the motor. The terrain where the aircraft impacted was a dry riverbed of gravel, dirt and schrubs approximately 20 ft below the level of the airfield. The pilot exited the aircraft through the broken windscreen and phoned for assistance. The wreckage was well contained to the aircraft final resting location.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Delay takeoff during periods of high, variable, gusty winds.
