

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Indianapolis State: IN

ZIP: 46241 Country: USA

Latitude: 39.8277 N Longitude: 86.2988 W

(Enter in decimal degrees or degrees minutes seconds)

Accident/Incident Date/Time

Date: 09/09/2022 Local Time: 12:15PM
mm/dd/yyyy

Time Zone: EST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N42VU

Manufacturer: CIRRUS

Model: SR20

Serial Number: 2440

Year of Manufacture: 2018

Amateur-Built: ☐ Yes ☒ No If Yes ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 3150 lbs

Weight at Time of Accident/Incident: 2850 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: 2 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
☐ Restricted
☐ Aerobatic
☐ Limited
☐ Balloon
☐ Provisional
☐ Commuter
☐ Special Flight
☐ Transport
☐ Experimental
☐ Utility
☐ Special Light-Sport
☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☐ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☒ Tricycle ☐ Tailwheel
☐ Amphibian ☐ High Skid
☐ Emergency Float ☐ Skid
☐ Float ☐ Ski
☐ Hull ☐ Ski/Wheel
☐ Other Launch/Recovery System
☐ None ☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☐ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type (Reciprocating)

☐ Carburetor ☒ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Serial	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The initial assessment of damage included damage to the leading edge of the left wing (dented stall strip and broken composite material), a damaged landing gear (broken fairing), propeller strike, destroyed taxiway sign.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I, Cory Dean Turner, was PIC of N42VU acting as flight instructor on the day of September 9th, 2022.

On this day, my student, Darin Johnson, and I departed runway 3 at eagle creek airpark (EYE) around 11:20am to conduct a dual local maneuver lesson, consisting of: fundamentals of flight review, slow flight review, and introduction of power on departure stalls and power off approach to landing stalls and the appropriate recovery procedures. Our plan went unchanged and our intended destination was back at EYE.

My student, Darin Johnson has around 6.5 hours in the airplane. After completion of the planned Airwork for the day I asked Darin if he could take us back to eagle creek airport. Just the day prior Darin had landed the airplane by himself for the very first time.

While inbound for landing at eagle creek, Darin ran the appropriate checklists, obtained KEYE's ASOS weather information, and told me that we were going to land on runway 3 due to the winds being 090 at 4kts. Darin entered the traffic pattern 45 degrees for the left downwind needing very little verbal instruction. Darin turned final approach just below glide slope and slightly slow (72kts). He added power and leveled off to reobtain airspeed and glide slope (as indicated by our two-unit system PAPI). He continued his stabilized approach. I instructed Darin to pull the power to idle, that the runway was made and to continue flying the airplane to the runway. As we entered ground effect slightly to the right on centerline, I instructed Darin to add left rudder, to bring the nose up and to hold it off. Darin added right rudder with what I believe to be some additional right brake (possibly due to Darin being too high on the rudder pedals). Upon touchdown the left main contacted the runway first, then the right main made contact with the runway. Upon touchdown of the right main the aircraft changed its direction and pointed in the direction of the grass along side runway 3. My initial instincts were to stand on both of the brakes because attempting to conduct a touch and go felt unsafe. Again, I stood on both brakes to attempt to slow the aircraft down. With the velocity we were carrying I did not attempt to bring the airplane back in the direction of the runway as I felt that to be unsafe, as well. Our landing roll took to the grass, and I wanted to keep the aircraft in as straight of a line as possible and maintaining its upright position. We hopped over taxiway intersection A3, where the aircraft impacted the taxiway sign at A3 and came to stop shortly after. After the aircraft was at a complete stop, I secured the airplane and my Darin and I exited the aircraft. Soon after assessing the damage that occurred, I called the Chief Pilot, Jason Napier of Vincennes University.

My initial assessment of aircraft and property damage was: a propeller strike, dented stall strip and broken composite material on the leading edge of the left wing, broken left main landing gear fairing (where the strut meets the fuselage) and a destroyed A3 taxiway intersection sign.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

It is our opinion that the CFI Cory Turner should get additional training on proper technique when teaching landings. CFI took for granted that the low time student could satisfy the task at hand and assumed he would do the correct action. This should not have been the case and in general everyone makes mistakes. Students and Instructors should make sure their feet stay on the ground and not on the brakes at touch down. If for any reason the approach to landing is not stabilized then a go around should be initiated.

Respectfully,

Jason A. Napier
Chief Flight Instructor
Vincennes University
