Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

- Aircraft lost upper portion of vertical stabilizer + rudder was severed from the tail except lower portion below the horizontal stabilizer.
- Left wing cuff was torn open 24" about mid wing where lift strut attaches to spar.
- Left side landing gear was destroyed + fuselage bent where gear attaches.
- engine bay lower cowling was damaged carburetor broken off from oil pan
- propeller is damaged from cable strike & one blade bent from ground strike

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday Dec. 3rd at approximately 14:30 mountain time I preflighted my 1948 Stinson q4 3P3 Mott airport. Fuel was low so we purchased 45 gallons of 100LL at the field. I performed 3. full stop landings solo, before taking up my son and daughter. We departed 3P3 around 14:50. We flew to Dickinson area for a sightseeing flight. At approx. 15:40 we decided to head back South East toward Mott airport as the sun was getting low. On our way back we planned to get some aerial pictures of the sculptures along the "enchanted Highway". We were enjoying the aerial views of the various sculptures along the highway. I was flying on the East side of the Highway parallel to it headed south. We were flying at approximately 1000 AGL to get a good view of the sculptures. After passing the last sculpture I encountered a power line just north of Regent, ND. It's the only main powerline in the area and with the sun setting I failed to see it till to late. I pushed the nose down to fly and make it under the wires, time was around 16:10. There are 3 large transmission wires in a parallel position here, my propeller severed the lower one but the tail struck the middle wire. After clearing the wires the plane wanted to spin left out of control. Half off the vertical stabilizer was severed & 3/4 of the rudder was also severed. I gave the engine full throttle gave rudder full right & right aileron. I was able to regain control and flew the airplane out of an area there that was not good to land. It was a river bed area under the power lines. The airplane would not fly straight because of left wing damage to cuff causing drag & P factor. I flew approx 3/4 mile turned back N. to a large open wheat field. I was getting ready to get up for landing when the engine lost all power around 25'agl and we made a hard landing in the field. If the engine would have ran a few seconds longer I could have made a normal landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Because of the setting sun the wines were hard to see, so an earlier flight along the highway would have been better.
Also and more important: maintain a higher level of flight
To be sure to clear all or any power lines in the area.
