

3/9/23

Accident Write Up

Eden West

At about 5:45 PM on 3/9/23, I was called to take FedEx out of hangar 6C. I was clearing snow from building 53's parking lot with the bobcat. I parked the bobcat, went through the maintenance building and onto the ramp. I got into the blue Nissan maintenance pickup and started to drive from maintenance to hangar 6C. I started to speed up and then I saw N46CV come into my view of the windshield. I did not hear them due to the wind and heater on the truck and I did not see them through the left driver side window. I started to stop but slid on ice. I turned left a bit to avoid their right engine. I slid under their right wing, missing the engine completely and we both came to a stop. I parked the car and got out of the vehicle. I went to the king air's door and waited for the pilot to come out. We asked if each other were okay and then assessed the damage of the accident while calling Tower and our supervisors. We then called the police, took photos and began the accident reporting and assessing procedures.
