

X Anthony White - [REDACTED]

On Saturday March 11 2023 I and the Pilot of the other helicopter were taking some people on a donated hog hunt in the Oklahoma Texas area. We had checked the weather and weather was good with at least wind @ 7-9 knots. We boarded our passengers and proceeded SE to look for hogs. After finding a group we "or I" lowered collective to pursue a group. As we prepared to shoot I saw the other R44 lose altitude we "I" began to regain altitude as I watched the other R44 pitch up and settle into the flooded field. Upon the skid on landing the R44 tilted to the R a blade strike occurred and the R44 turned nearly 180° now facing the South then landing on its L side. I circled the area for a gate LZ and as we landed saw the pilot and 3 occupants exit the helicopter.
