Date Report Received

04/13/2023

3/29/23—Off airport forced landing incident report.

Lincoln, IL 62656

On the above date, at approximately 1700, I arrived at the airport and performed a standard preflight check as prescribed for a PA-32 on the aircraft in preparation for an instrument flight lesson with Mr. Larry Whitbeck. After pre-flight, I started the aircraft and taxied to the fuel pump.

I completely filled all four tanks at AAA prior to our departure. Mr. Whitbeck arrived shortly thereafter. Once loaded in the aircraft, we discussed the plan for training on that evening. We then obtained the wind, weather, and altimeter report from the appropriate radio station. Thereafter, I performed a run-up, and we taxied to runway 3 for departure. I ran through possible emergency situations that could arise on departure in my head as we taxied.

Once airborne, we flew slow square patterns practicing maintaining straight and level flight, standard rate turns, trim, and maintaining headings. Our power settings were probably 60-70% while performing these maneuvers. We used lower power settings for the training maneuvers in order to be economical and to conserve fuel. We then performed a couple of 360 degree turns followed by ascending and descending S type curves, which was to work on climbing and descending within allowable IFR limits. I operated these training maneuvers under a view limiting device and Mr. Whitbeck acted as my flight instructor/safety pilot during these simulated instrument maneuvers.

Mr. Whitbeck provided me vectors and instructions that placed me on the downwind to runway 3 at KAAA at traffic pattern altitude. He advised me to remove the view limiting device and perform a full stop landing on runway 3. I did that, and we back taxied to perform another pattern and landing on runway 3 at KAAA. The second departure and landing thereafter were without incident. We back taxied again in preparation for the third takeoff and landing within the pattern to bring me current to carry passengers.

The departure and maneuvers in the pattern on our third trip around were without incident. I recall activating the carb heat without incident when abeam the runway numbers. When I turned final, my altitude appeared to be high. Mr. Whitbeck activated the VASI lights, which confirmed that fact with four white lights. In order to begin losing altitude, I reduced power to attempt to intercept the VASI glide path.

Once the first red light on the right of the VASI appeared, I recall Mr. Whitbeck indicating that I should make sure not to get low and should add a bit of power. When I made the attempt to add power, the plane did not respond. I advised Mr. Whitbeck of this, and proceeded to push the power all the way on, which produced no effect and we continued to sink.

The point at which the power did not respond was after we had flown the airplane for approximately 60 minutes. I remember that the sun was setting as we turned final and it was light enough to see the ground below. When the power did not respond, the VASI was showing one red and three white lights. However, without power available, we continued sinking quickly. I have no memory of what happened from that point until the first responders were attempting to cut us out of the aircraft, but an emergency off airfield forced landing was obviously required.

When I was removed from the aircraft, I was transported, by ambulance, to Memorial Hospital in Springfield. After doctors attended to my injuries in the emergency room, I was admitted to the hospital for observation and treatment.

End Report.
