Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.		
I departed KAUS approximately 8:20AM 04/17/2023. To T82 (Gillespie County non towered), where the incident occurred. I was the pilot and only occupant. I was not injured. I had flight following and was with Houston Center after handoff from Austin Bergstrom (KAUS), then was instructed to squawk VFR once I had the landing field in sight. It was just a personal trip with plan for full stop landing, with immediate return to KAUS. I was flying for personal enjoyment. I had full tanks of fuel at start; flying time to incident was only about 40 minutes so both tanks were likely over 3/4 full at landing at T82. Flight was smooth. When I checked weather for T82 in flight winds were calm. I overflew field at 3200 (500 over the TPA) for tear drop entry into downwind for runway 32. While I was in the pattern I believe winds may have shifted (based on wind data from one of the people I spoke to at FBO), giving me a tail wind making it harder to reduce airspeed on short final. I believe I had in full flaps on final. When it began to look like I would land longer than intended, I attempted a go around, adding full power. I was not getting sufficient lift. I believe I porpoised early, and subsequently a bit further down the runway the nose wheel hit and I went off runway to left and stopped soon after. Airport personnel came over to help and wanted me to exit the aircraft quickly so I turned off mags and master. I was uninjured and able to exit the aircraft myself with my personal backpack and headset. I left key hanging from the heading indicator knob. The people that work at the airport moved the aircraft to FBO parking area. FAA was notified at approximately 10:30AM. I have not seen the aircraft since that morning. I assume it's still at T82		

RECOMMENDATION (How could this accident/incident have been prevented?)		
Operator/Owner Safety Recommendation When I selected the runway, winds were calm and I didn't hear any radio calls from others about what runway they were using. Given calm wind, I chose the runway with left traffic as I prefer that for better visibility. In hindsight I wish I had flown around to observe the wind sock better, as I would have certainly done things differently. Another important lesson for me is to make the go around decision much earlier - as soon as I know I'm fast, or high, or off center, or whatever. If I'm not set up for a great landing I need to pay attention and consider a better way or even a different airport if needed. All of the instructors I worked with during my PPL training were highly proficient, so I do not believe this is a reflection on them. I've done many uneventful go arounds in the course of my training. I've never even been in a car accident so this situation is highly significant to me, and has my full attention. I plan to spend time in ground lessons and flying with an instructor, reviewing all the scenarios for what went wrong in this situation. I plan to review and study all aspects of headwind, tailwind, flaps airspeed as associated with landing. I want to review the timing and thought process of my decisions, so that I will not replicate any part of what happened in the future.
