Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Tail broken off at leading edge of horizontal stabilizer and hanging by cables, right wing collapsed at strut, left wing tip destroyed, cowl and prop bent.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. Filled tanks all the way at 3au with mogas Leaned per poh for all stages of flight Shutting down at KRVS it took 2 minutes to shut down with the mixture pulled all the way out. Got to KLLU without any problems in the air. Same mixture idle problem. Added 12 gallons of 100LL. Assuming conservatively 8.5-9 gallons remaining (padding calculations using poh) Did 3 full stop landings solo for night currency. Left KLLU with plan to land as needed. Although we filed for KDVN, KEOK was the goal. Diverted to KMBY because fuel gauges were reading empty well before they should've. After visually identifying fuel quantity it was determined fuel gauges were wrong and we determined with a combination of visual estimations and assumptions of actual burn based on poh data the tanks had at least around 3-4 gallons each. We calculated around 8.2 gallons needed to get to KDVN. Added 8 gallons. Departed KMBY at 12:00am and picked up flight following After cruising at 7500 feet on the last leg we noticed clouds at 7500 so we dropped to 5500 for required cloud clearance and ice prevention On decent into KDVN I loaded RNAV 3 into KDVN. Just before reaching the IAF (YODUP) at 3100 MSL we experienced a loss of engine power similar to pulling the throttle all the way out quickly. I immediately pitched for best airspeed and looked for a landing spot. Found the only lit road in range and made a turn towards it. Simultaneously I made a mayday call to Chicago center. I adjusted mixture and throttle position, checked fuel selector position, and did a fast mag check. None worked immediately but shortly after, we experienced a burst of engine power. I assumed it was back so I turned back toward KDVN 5-10 seconds later we lost the engine completely again. I committed to landing on the road Approaching the road, we got hit with a gust of wind that picked up the right wing and pushed us towards power poles I applied right rudder and full right aileron but it wasn't enough and the wing clipped the pole about 12-15 feet off the ground I saw a flash of blue from the power lines and we came to rest on the railroad tracks After making sure we were both okay we exited the aircraft ASAP We were both awake and very alert the whole time and were being extra cautious due to it being night		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Complete engine loss of power.
