Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel strut collapsed and prop strike.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I approached the Longville Airport from the west at 3500 feet. The weather conditions were mostly clear with scattered clouds at roughly 6000 feet. The AWOS at Longville was reporting variable winds, shifting from 40° to around 100° at 4 to 8 mph.

As I approached the airport, there was another aircraft approaching the field from the south. We had visual contact with each other and talked about the variable winds. At the time the other aircraft was setting up for landing on runway 13 and I announced that I was downwind for 31. At the time, my reasoning was that the windsock on the south side of the field was favoring 31. The other aircraft changed their approach to land on 31 also because they also saw the windsock favoring 31.

I set down on runway 31 normally and had decelerated to about a 40 to 45 mph ground roll. I had not yet retracted the flaps when a strong wind gust started to pick up the right wing. I steered more aggressively into the gust, hard right rudder and added more right aileron. When the wing settled back down and nose wheel touched, the airplane darted to the right. I corrected by going to left rudder and found myself fishtailing down the runway, drifting to the left.

As I was slowing down, the left main wheel went off of the asphalt and into the soft muddy wet grass, drawing the airplane further to the left off of the runway. I continued slowing down but had very little rudder authority. I was using full right rudder but the airplane was in a sideways skid.

Running parallel to the runway and about 50 feet west of the runway is a stormwater drainage ditch that is about 2 feet below the grade of the runway. The airplane came to a stop on the west bank of the drainage ditch with a folded nose-wheel and prop strike.
