Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Dented Aircraft Vertical Stabilizer

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KFNL runway 15 for local pleasure flight to the east. Normal initial climb. Cleared left turn (east) on course. Transitioned to cruise climb. Approximately 3 miles east of the airport at 6600 MSL, I saw a brown wing, with feathers spread, flash by my left canopy and immediately thereafter felt a solid thud.

Reduced power, stopped the climb, did a quick controllability check and initiated a gradual turn back to the airport. Since I was still on TWR frequency, I contacted them, telling them I had a bird strike and needed to return to the airport. Did not feel the need to declare an emergency at that time. TWR cleared me to land on 15 and I landed without event. Taxi to the ramp, where GND told me I had a dent in my tail.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I do not feel it could be prevented. I didn't see the bird until it was too late.
