Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main gear broken at the chrome. Left gear door was broken off. Right main gear bent at chrome. Left wing contacted ground, wing tip bent. Left aileron Outside in middle mounts broke causing slight damage at inside of aileron. Airplane hit the lower cowl and propeller with power off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KCOS at 10:55 am for a local flight with a passenger (son). At the time of departure sky was clear with light winds out of the south. Departed the class C airspace to the north. Did some flying over Castle Rock area then moved out over the east near Kelly airpark. Proceeded to let my son do some turns to the left and right. At about an hour of flying we proceeded to return to KCOS where I observed a thunderstorm building over the city. I received ATIS info where they were calling winds at 160 at 8. I reached approach and was advised to stay out of class C airspace until vectored in due to high volume of aircraft. I circled for approximately 5 min to the north of class C airspace and was then cleared by approach for a straight in landing on 17R. I entered an approximate 10 mile final straight in for 17R. At this point the thunderstorm had stretched out over the approach for final at about 8000ft msl. At approx. 4 mile final I experienced heavy turbulence as I reached the thunderstorm and an extreme loss of altitude. I countered with full rpm and take off throttle to maintain altitude. At about this time I heard a plane call out they were going around due to wind shear. I was contemplating goin around as well and trying 17L as it is approx. 2 miles to the east and the storm had not reached that yet and if that didn't work I would divert south to Pueblo to wait out the storm. At approx. 2 mile final I came out from the other side of the storm and the air started to smooth out so I decided to proceed with my landing but ready to go around if something happened I didnt like. I proceeded to initiate a normal landing sequence with no abnormal turbulence or wind issues. Another plane called tower and asked about wind shears and I recall the tower saying they werent reporting any. The pilot then called back and questioned that due to the other pilot going around but I dont recall a response. Again I was on high alert for any shear or abnormalities. I touched down on the main wheels at 95mph with zero incident on centerline. As the plane was settling on the mains it started to slightly drift to the left so I added some right rudder to bring it back to centerline. I was approximately 10 feet to the left of centerline when I made the adjustment and I was starting to transition the tail down when the airplane started to go hard to the right and the tail was coming around to the left. I immediately added power to try to correct the airplane and this stopped the rotation of the tail but by the time the airplane stopped turning I was pointed approximately 45deg to centerline to the right and there was not enough runway to regain flight or get the airplane back to parallel to the runway so I held full left rudder and pulled power. The airplane was still in a skid trying to go to the right when it exited the runway and hit the soft dirt. The gear were side loaded and the left gear snapped causing the left wing to drop and hit the dirt. The nose immediately hit the ground, the tail came up about ten feet and the airplane rotated back to the left and settled back down on the left wing and right gear parallel to the runway. The airplane ended up 130ft off the runway 17R between 17R and taxiway Alpha. Right between A1 and A2. I heard a pilot call tower to report I had gone off the runway. I then called tower and reported we were ok and relayed my position. I then shut off the fuel, battery and mag switch and my son and I exited the airplane unharmed. There was no fire. The left gear was laying approx 30 ft from the airplane along with the gear door and the left aileron was still attached to the inside mount. There were no other parts missing from the plane. The pilot who was lined up #1 to take off on 17R witnessed the incident and left his name and number at the museum. His name is Wyatt Fry [REDACTED]
