DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Fiberglass front and windshield broke off, airframe tubing bent and broke, moderate wing damage on right, front wheel off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The day before, (6/22/23) I changed the fuel filter and drained the old gas out and replaced it with fresh non-ethanol fuel. I did a pre-flight inspection on the motor and the exterior of the craft. The next day, (6/23/23) I did another pre-flight inspection both inside and outside. I did an engine runup, checked mags, controls including brakes, engine temp, and decided to take it on a test run alone. I flew the pattern about 20 minutes and landed. My son joined me at that time and we took off to fly the thermals over the lake. At about two miles out from the pattern, the engine sputtered and cut out so I immediately checked gauges. Everything looked normal so I gave it more throttle. It kept trying to cut out so I pulled back throttle power to slow the speed. Then it completely died. I was unable to start the engine. I immediately looked for a favorable place to land. at 1400 ft and a light headwind from the west, I didn't believe there was enough room to reach the chosen destination so I kept it in the air as long as possible. When I was close enough to see more clearly, there were two people, some power lines and a modular home in the path, so I knew the small field was the best option. I couldn't know if there were children nearby or hidden lines. I put the plane in a full slip, and it was working, but not quickly enough. I switched and slipped the other wing but there wasn't enough room to land, so I straightened it out and attempted to land in the field. I was still way too fast and the field was grown up with tall, thick grass. I was afraid this would cause the plane to tip forward, so I chose to try for the widest opening in the trees. The only option was to make a hard bank and stall one wing. The plane bounced and came to rest right side up.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

In my opinion it was a fuel pump failure
