Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

HIT 3 HARDWOOD TREES. BOTH WINGS RIPPED OFF AND FUSELAGE HIT THE LAST TREE FROM BELOW. RH MAIN GEAR RIPPED OFF AND NOSE WHEEL COLLAPSED. ENGINE RIPPED FROM IT'S MOUNTS. AIRCRAFT WAS TOTALLY DESTROYED.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KLaw destined for 4M1 4 days prior to accident. There was an engine failure 30-40 miles into the flight. I landed in a farmer's field near Rush Springs, Ok. I took the cowl shells off and I asked Lawton Aviation Services to send someone out to take a look at the plane. Two A&P's came out to find out why the engine stalled in the air. After their inspection they told me they could not find a reason for the engine failure. I put the cowl back on then did a run-up, checked fuel pressure with electric pump (20psi) and with mechanical pump (24psi). Mags checked ok, CHT normal after 10 minutes of idle at 1000rpm. Law enforcement cleared a path on the local 4 lane highway to the north and I took off with 4M1 as my destination again. I climbed to about 10,000 feet to see if cooler air would help on a hot day but about 1hr into the flight the engine started a slight misfire, so I decided to descend to 9500 ft because I was heading easterly (VFR) anyway. As I experimented with the mixture I discovered that richening and leaning did nothing to stop the misfire, so I turned on the electric fuel pump and checked each mag. Left mag off made no difference, so I turned it back on. Right mag off immediately made the power fall off dramatically, so I turned it back on. Then I tried to increase MAP and the power dropped off completely. I increased prop pitch and set up for best glide speed (100 knots), looked for an airport near by. KTQH was the closest so I dialed 121.5 mhz and called ATC to let them know my position and intention. After they replied that they had emergency services on there way, I lost contact. I could see below the broken layer that was below me and could tell it was about 1000 feet AGL but I could not see forward through it as I approached the tops because of the angle of vision. By the time I got through the layer I could see cars and telephone poles and farm houses and fences but all that was in front of me was a grove of hardwood trees about 200 yards directly ahead and there was no time to turn (and lose too much altitude or risk stalling) so I flaired and as my mains touched down I pushed the nose forward to collapse the nose gear in order to use as much energy (by dragging the nose on the ground) as possible before hitting the trees. The right wing hit a tree and broke off then the left wing. Hard to tell (because the plane was spinning right then left) what speed I was moving before the fuselage bottom hit the 3rd tree but probably about 20 knots. The emergency personnel were there within 10 minutes of me coming to a stop. I was breathing very shallow. I was very uncomfortable as my leg was outside the cockpit. Injuries are as follows: Broken left femur, broken left clavicle, 6 broken ribs, broken left elbow, broken right heel, various lacerations and bruises.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

HAD AN OFF-AIRPORT LANDING PRIOR TO THIS FLIGHT WHERE I LANDED IN A FARMER'S FIELD DUE TO ENGINE FAILURE. TWO A&P'S CAME OUT TO CHECK THE ENGINE AND SYSTEMS. THEY FOUND NO PROBLEMS EXCEPT ONE "SPARK PLUG DID NOT LOOK GOOD" BUT NOTHING THAT WOULD CAUSE ENGINE FAILURE.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

EMERGENCY PERSONNEL CUT THE FUSELAGE OPEN TO EXTRACT PILOT.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)
