Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft:
 propeller broken
 engine stopped in motion
 engine mount and cowl damaged
 windshield and glare shield broken
 passenger seatbelt airbags deployed
 avionics damaged
 landing gear collapsed x3

Airframe parachute deployed
 fuselage broken in front of tail

Other property:
 Damage to corn in corn field where aircraft settled

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Please see attached.

As requested, the following is my narrative of my flight of July 11, 2023, in Cirrus SR22 N151SR:

To Whom It May Concern:

On the evening of July 11, 2023, I departed airfield NE36 in daylight VFR conditions as the sole occupant of the aircraft, after checking weather and preflighting the aircraft. The weather at NE36 at the time was clear and visibility unlimited. I checked the weather on my phone prior to the flight and verified current conditions and radar. I did not have a flight plan filed.

My preflight reflected about 6 ½ quarts of oil in the engine, and approximately 30 gallons of fuel on board according to the gauges. Visual inspection showed fuel in both tanks, under the tabs, consistent with the fuel gauges. The anticipated time for the flight was about 35 minutes, and my typical fuel burn is just over 15 gallons per hour. I noted no abnormalities regarding the aircraft on visual inspection. The preflight runup of the engine revealed nothing unusual after all checks performed.

No abnormalities were noted during takeoff or climb. I climbed to approximately 1500 ft AGL and proceeded on course with the autopilot holding both altitude and heading enroute to KGRI, the home base of the aircraft. While enroute, somewhere between approximately Broken Bow and Loup City, Nebraska, the engine missed briefly.

I proceeded directly enroute through the flight and maintained a straight and level flight with the autopilot operational. While enroute just north of Boelus, NE, the engine sputtered briefly and then stopped completely. The propeller continued to rotate/windmill in the slipstream, and I immediately tried to restart. My initial impression was that I had had an ignition issue, as the ignition had been recently serviced, so I cycled the ignition as soon as the engine first missed. My recollection is the engine stopped just after I cycled off magneto #1 and did not restart when it was switched back on and magneto # 2 shut down briefly.

While trying to restart the engine, I made a MAYDAY call to the KGRI tower on radio frequency 118.2. They did not respond. I did not expect them to do so as I was aware the tower was closed at that hour. I have known of controllers who were still in the tower afterhours and answered the radio in the past and thought it worth a try. Then I turned on the fuel boost pump, which is normally off during the enroute phase of flight. I cycled the fuel tanks and the fuel gauge indicated I had more fuel in one tank, so I kept the fuel selector on the fuller tank. The Garmin navigator #2 in the aircraft is set to alarm every 30 min and flash a reminder to switch fuel tanks to keep the fuel burn relatively even in the tanks, and it is my standard protocol to switch tanks immediately when this alarm displays, then turn off the alarm only after switching tanks. While attempting restart, I had turned off the autopilot and had trimmed the plane back to slow descent.

I began to realize that I needed to focus on landing rather than engine restart. There was a north/south gravel road not far in front of me, and the surrounding terrain was relatively hilly, so my initial thought was to try to turn the plane to the south and land on that road.

As I descended further, I noted power lines on the east side of the road, trees on the west, and a rather large hump in the road just south of where I would likely set the plane down. As such, this did not appear to be a good landing spot as I drew closer. I turned my attention to a mowed alfalfa field on the west side of the road and aimed for landing in that field. As I descended further, I did not believe that I would have the necessary altitude to glide to that field.

I was relatively low in altitude for the parachute to deploy and function properly, so when I made the decision to pull the parachute, I did so immediately. I remember hearing the rocket in the parachute go off with a deceleration and somewhat of an upward pitch in attitude of the aircraft.

I believe I was knocked unconscious for an unknown time upon impact and remember waking up in the pilot's seat and looking forward ahead of me to the broken windshield of the aircraft and surrounding corn. I was concerned about fire. I immediately turned off the fuel boost pump on the console, and looked for my cellphone, which I thought I had left sitting out on the copilot's seat. I did not see the phone, so I departed the aircraft through the pilot's door. I got out on the left wing of the plane, which was sitting on the ground as the landing gear had collapsed. I still thought I needed the cell phone to try to call for help, so I got off the wing and walked around the nose of the plane (noting the broken propeller) to the copilot's door. I opened the copilot door and tried to sweep the seat and the floorboard with my hand to look for the cell phone. Then I walked back around to the pilot's door and reached into the floorboard of the pilot's side, where I found my cell phone.

I remember blood in the cockpit, running down my face and hands, and covering my phone. I knew I was injured and needed to find help. I could see a farmhouse approximately a quarter mile south, so I immediately left the scene of the crash and started walking toward that house through the cornfield. I came to the edge of the cornfield, climbed over the fence, and was standing in the mowed alfalfa field where I had previously hoped to land.

My cellphone did not immediately function, as my hands and its screen were bloody, and it did not recognize my fingerprints or commands. I got it cleaned sufficiently to operate, called my wife in Grand Island, and asked her to call the emergency unit. In short order I was picked up by the emergency crew and was taken to Grand Island Regional Medical Center for evaluation and subsequent surgery. According to my cell phone, I called my wife at 9:24pm that evening from near the crash site.

These are the facts as I recall them at this time.

Thank you.
