May 29, 2023

On 5-27-2023 about 1pm , N4182G Thrush S2R-G6. I was spraying pasture on NE8-29-36 Grant county. There is a power line south edge of field that services a house and it runs on an angle to the north east. South of that point a Zip line running to the south east. On my 4th pass going south I hit the zip line. Cable was caught on airplane as I continued south, dragging in the adjacent pasture. I circled a couple of times for enough altitude so cable was clear of the ground before heading back to the airport of about 6 miles. Landing Ulysses on runway 17 the cable hit a power line north of the runway. Having a ruptured right tire from the cable strike the airplane pulled to the right and we stopped in the grass beside runway. Discovered later also hit a power line in the pasture south of my field.

Arriving at the field there was a power line diagonal and then straight and then a 90 degree bend that run through the field. Circled the field and the diagonal section serviced the house on the south end. So I realized no power line coming from the east west road to the house. That's all I could see was no line there and all I had to worry about was the lines in the field. I knew the zip line was there, I was concentrating on this power line in the field. Not seeing a power line coming from the road I just assumed I was clear on the south side of this field. The first three passes I entered and exited the field at the power line height. Forth pass going south the angle of the power line opened up more of the south edge of my field. So as I was exiting the field going south I nosed over to get to a lower spray altitude for the south edge. That's when I hit the zip line.

The cable wrapped around the right landing gear. The cable broke on both anchor poles of the zip line. To my left was the longer length, (400ft) we never measured it. When it broke it sling shoted back to the plane and damaged the bottom of the wing and took the boom off and everything hit the tail and bent the vertical fin and rudder over. Bent the fuselage tubing at same point. Plane wanted to roll left but I had adequate aileron to control plane. There was no propeller strike or engine damage. Normal shut down after landing.

To prevent this. I'm guilty of trying to do a good job for the farmer. I was wanting to get back down low over the field as soon as the power line would allow. Pulling up and over the power line that was running diagonal under me, I was watching it and forgot all about the zip line. I circled the field looking at obstacles and started to work. I dodge obstacle on every field I spray. This is 43 years and the first time I bent an airplane. Always be alert is what advice I would have to share.
