Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage incurred as result of emergency landing, extrication, and removal from crash site. Landing gear dislodged. Propeller dislodged. Passenger wing broken. Doors dislodged. Windows cracked/broken. Cabin somewhat crushed in. Baggage in rear seat bent/crushed. Fire retardant sprayed over plane and contents.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On July 27, 2023, I rented N30632, a Cessna 177 owned by the EVV Pilots Club, for a planned flight from Evansville Regional Airport (KEVV) to Grand Geneva Resort Airport (C02) with a planned fuel stop at the Dekalb Taylor Municipal Airport (KDKB). I had previously only flown this aircraft once, on a 1.2 hour checkout flight with an EVV Pilots Club flight instructor. We accomplished three landings during the checkout flight as well as airwork maneuvers. During that checkout I learned that the flying club stored the aircraft with the fuel selector valve in the "right" position, to prevent cross flow between the fuel tanks, and moved the fuel selector valve to the "both" position prior to takeoff.

Prior to the accident flight, I completed a preflight of the aircraft, which turned up no significant discrepancies. I manually checked the fuel in each tank using a calibrated fuel dipstick. The sticks indicated that the left tank contained 24.5 gallons and that the right tank contained 19.0 gallons of fuel, for a total fuel load of 43.5 gallons. With the single passenger and our luggage, I calculated that the aircraft's total weight at the time of takeoff would be 2453 lbs, below the max gross takeoff weight of 2500 lbs. and the expected fuel burn for the flight to be approximately 23 gallons of fuel.

I started the airplane, conducted a run-up and completed the pre departure checklists, including moving the fuel selector valve to the "both" position. The departure from Evansville was normal, and we climbed to 6500 while receiving VFR advisories. I leaned the aircraft out in cruise and noted from the aircraft fuel totalizer that the fuel burn was approximately 10.5 gallons per hour. Once clear of the Red Hills MOA and in the vicinity of Champaign Urbana, clouds forced us to descend to 4500 feet. At this time, I noticed that the fuel gauge for the right tank was indicating approximately 1/8 full tanks, and the left fuel tank gauge was indicating approximately 3/4 full tanks. At this time, I elected to switch the fuel selector to the "left" position to equalize the fuel in the two tanks.

Approximately 25 miles from the De Kalb airport I began a VFR descent from 4500 feet. In accordance with the checklist, I moved the fuel selector valve from "left" to "both". I observed at this time that the fuel in the left tanks was indicating approximately 1/8 full tanks, and the right tank was indicating below the 1/8th full mark.

My intention was to enter the left downwind for runway 20 at De Kalb, and I announced my intentions over the airport's CTAF. During my approach to the airport however, the engine suddenly quit while I was Southeast of the airport's runway. I immediately turned to enter a right base for runway 02, and announced my intentions over the airport's CTAF. During the glide, it became apparent that I would not make the runway, and that light industrial buildings and powerlines would prevent me from safely gliding to runway 02. I elected instead to land in a cornfield southeast of the runway. During the landing the airplane touched down hard and struck the wingtip of the aircraft. The impact damaged the aircraft, and I regained consciousness after my passenger. I was removed from the aircraft by emergency medical personnel.

RECOMMENDATION (How could this accident/incident have been prevented?)
