RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe that this accident occurred for a variety of reasons, not one particular cause. Any of the following could have broken the chain of events which led to this incident.

- 1) Regulation Prohibits the planting of corn in adjacent field (where impact occurred). Despite the fact that the city owns the airport and field, and the city ordinance prohibits growing corn in that field for safety reasons, it was ignored.
- 2) Density altitude: The change in temperature through the day between the time I made my initial performance calculations and the time of impact contributed to this event. In the future, I will calculate performance everytime there is an ATIS change.
- 3) Preferred runway choice: The very unusual wind shift created a shift of desired runway. This offset by the likelihood of vehicular traffic. In the future, I will take even a light wind as a serious contributing factor of aircraft performance.

Crash

7/28/2023

This morning I got to the airport at 6 AM. I did my preflight and found nothing out of the ordinary with my airplane. I started it and did my run up and everything was working properly. I taxied to my water tank where I loaded water that I was planning to spray off to rinse my tank over a field. Fog was not forecasted but it started to set in shortly after I landed around 6:30 AM so I shut my plane down. At about 9 the fog had fully cleared from the area. I did my preflight and run up again and everything operated as it should. I loaded again to perform various testing procedures to check for proper boom pressure, leaking nozzles, flow control valve operation, GPS operation, among other equipment. I landed around 9:45 and loaded again to practice some flight maneuvers over a field. All my equipment was working properly and my plane was running properly. I landed around 10:45 and loaded a 110 gallon mixture of water, fungicide, and insecticide (300oz Nutex EDA, 150oz Piator, and 530oz Ridgeback) to spray on my families field as test strips to see how the corn would yield differently. I did not fill up with fuel completely filling to roughly twenty two gallons. The wind was slightly favoring the northly runway so I started fairly far back to take advantage of all usable runway like I've done many times before to start my take-off. Also I don't take-off headed southerly if there posses a safety risk to on coming motor vehicle traffic. I had one notch flaps in and full throttle before I released the brakes. Half way down the runway or so my tail and left wing were lifting as usual so I did not change my coarse. As the corn field was approaching I put full flaps but my right wing would not come up. By this time braking was out of the question as I would have done the same damage but earlier in the corn. I kept with it as in the past I've always cleared the corn. About 50 yards from the corn I pulled up letting my tail drop. I was airborne but my booms hit some tassels but seemed to rise above them. I wanted to lower my nose to gain airspeed but did not want to keep my booms in the tassels. My tail hit the corn immediately after and I started losing airspeed. I'm hoping as I got beyond the north edge of the golf coarse line of sight I would catch enough wind to gain airspeed. I kept sinking because of the tail hitting corn until my booms hit again. Then I went down and landed softly despite the damage. I immediately shut the master switch off got out and ran toward the runway where I met a golf cart who had driven a little ways in the corn. I yelled to them, two guys I never got their name, and they gave me a ride to the runway. The incident happened at just about 11:00 AM give or take a minute. I called 911 and the sheriff came out along with the fire department and ambulance.
