Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft sustained damage to the wing, body, Prop, engine, landing gear, struts and body. The wing spars broke, Prop had a strike, engine RPM would have dropped due to prop strike. Landing gear was torn off, struts are bent and parts of the front body are bent.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Sunday night August 6th 2023 at 20:10 I was out flying with a friend in Holiday, Texas south west of Wichita Falls, Texas. We were set up for a normal approach into the field and I went through my normal landing procedures. On short final I felt it needed a little bump of power to clear the trees and make it to the runway safely. I started to add throttle but we still continued to sink. I added full power to go around to set up a new pattern but realized the engine wasn't making any power. I quickly pushed the nose over to maintain a safe airspeed but that still wasn't enough to make it to the runway. We came up short about 30 feet and the left wing hit a tree and spun us to the side breaking both of the main landing gear, snapping the main spar and causing a prop/engine strike upon hitting the ground. After about 30 feet we slid to a stop. I rapidly shut off the fuel and turned the master off to prevent a fire. We quickly unbuckled our shoulder harnesses/lap belts and my passenger removed his helmet. We exited the aircraft in under 15 seconds of coming to a stop.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe as a safety recommendation I could have tried to add power slightly higher. If I added power slightly higher I would have noticed sooner that throttle was not responsive and I would have had more time to respond/react.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

_____ Hours

When I was coming in for landing I went to add power and the throttle was not responsive. I'm not sure what part was the issue or the actual reason for the issue. I just know the engine did not make additional power when I was on short final.
