

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Waco State: Texas

ZIP: 76708 Country: United States

Latitude: 31.62102 Longitude: 97.22485

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 8/06/2023 Local Time: 10:15

mm/dd/yyyy

Time Zone: Central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☐ None

AIRCRAFT INFORMATION

Registration Number: N6319G

Manufacturer: Cessna

Model: 172S

Serial Number: 172S10781

Year of Manufacture: 2008

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2550 lbs

Weight at Time of Accident/Incident: 2250 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent propeller tip, sudden stoppage of engine, lower firewall damage, damage to belly panel, damage to the floor boards, damage to the center console, damage to yoke area

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On August 6th, 2023, I departed San Marcos Regional Airport (KHYI) at approximately 8:30 pm and received VFR flight following to Waco Regional Airport (KACT). The purpose of this flight was to successfully meet the solo night requirements per 14 CFR 61.129 to meet the aeronautical experience towards my commercial pilot certificate. I picked up VFR flight following with Austin Approach and was handed off to different controllers to reach my destination. I was then handed off to Waco Tower where they told me to enter a right downwind for Runway 19. My intentions within their airspace were to do 10 takeoff & landings to a full stop to meet the required flight time. On the downwind leg for Runway 19, I noticed that the yoke was starting to give me a difficult time maintaining a stabilized descent, where I had trouble applying forward pressure. My first instinct was to utilize the trim wheel and try and relief some pressure off the flight controls. After engaging the trim wheel, the nose started to slowly come down but the pressure on the flight controls felt off. I'm not certain if the auto pilot was accidentally engaged, I actuated the electric trim on the yoke, or if I was just anxious at the flight controls. Waco Tower then cleared me for landing at my discretion. I repeated back my instructions, on approach to the runway I felt that I was higher than I was. As I abruptly hit the runway, I was in a nose low attitude which caused the nose wheel to impact the ground hard. After the initial contact, I instinctively pulled back on the yoke causing me to porpoise twice. After getting the aircraft settled on the ground, I lost complete control of the rudder pedals and thought I was going to veer off the runway very quickly. As this is happening, I do my best to try and stay on centerline and put hard pressure on the brakes. I contacted the tower and let them know that I was having trouble taxiing and requested that I would clear the active runway for incoming traffic. I made it safely to taxiway Alpha where I shut the plane & engine down and was greeted by the very helpful firefighters. In terms of damage on the aircraft the nose wheel is slightly bent, the elevator is fully back, the yoke is not wanting any forward pressure, and there is a minor prop strike.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have prevented by the following:

- Being more night proficient
- Taking more time to fly with an instructor during night hours
- Having a better understanding of the Pilot's Handbook regarding night operations and illusions
- Staying consistent with night takeoffs & landings
- Not to make a PIC decision of flying when anxious
- Acknowledging how important the Aeronautical Decision-Making Process is and how IMSAFE (stress) is always essential before any flight

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
