Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft settled very hard spotting the skids and engine struck ground.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During a “dual training” helicopter flight I, John Haas, was practicing power failure below 8ft emergency procedures with student, Galen Eskola. This flight began at 9:30 AM EDT and our accident took place at approximately 10:00 AM EDT on the parallel taxiway at the west end of the KGKT airfield. On our 3rd repetition of the maneuver we encountered the mistake that put us 20-30ft above ground level spinning right and uncontrolled.

Upon reviewing the incident I believe I did not have the throttle rolled fully off/ into the detent spring or while raising the collective to slow the descent of the helicopter I allowed the throttle to open. While arresting the helicopter the engine RPM and rotor RPM married up. This resulted in the aircraft lifting into the air due to collective being pulled and then spinning uncontrolled because the tail rotor didn’t have the effectiveness to correct the right spin at 60% RPM.

I immediately communicated with my student that I was on controls but am not sure if they released controls completely.

I tried to correct spin with left pedal input and was unsuccessful. I tried to raise RPM but was unsuccessful due to lack of power. I maneuvered the aircraft over the grass and lowered it enough to enter a hover auto. While attempting the hover auto I couldn’t roll off throttle to slow our spinning. I believe due to not double checking with my student that they were off controls. We hit the ground with enough impact to split the skids. I immediately shutdown the aircraft, fuel mixture off and fuel valve off in case of fire. Able to stop the rotor and exit with no injuries to my student or myself.
