Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tailwheel twisted to the right under the right horizontal stabilizer, damage to the Tailwheel attachment point of the aircraft frame, left main gear bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 8/11/23 at approximately 10:30 - 11:00 am, I was landing at Chillicothe airport (KCHT) to reload during a spraying operation. I touched down on the main wheels, and as I slowed down, I lowered the tailwheel and it began to shimmy. This had occurred on occasion before when I landed. This was fourth landing that day. The previous 3 landings were normal with no tailwheel shimmy or other issues. As the aircraft slowed, it began to veer right so I used left rudder and brake to keep it going straight until I slowed to taxi speed. As I slowed down the tailwheel shimmy stopped.

When I got to our loading area, Justin asked me how the aircraft was flying and I told him good until that landing. I explained about it pulling to the right. After we loaded the aircraft, I taxied to the north end of Runway 14. While taxiing I had to use left rudder and brake to keep the aircraft going straight on the taxiway. Once I was on the end of the runway, I stopped and looked at the tailwheel to see if it was lined up. Everything looked normal, so I began my take-off roll.

As I gained speed, I pushed the control stick forward, to start lifting the tailwheel. The tailwheel started shimmying very violently before the tailwheel raised. I immediately pulled back the power and applied brake to slow the aircraft after aborting the take-off. I had never experienced a tailwheel shimmy when taking off in this aircraft. A few seconds later the aircraft veered to the right and I applied full left rudder and hard left brake to correct the veer to the right, but the aircraft continued right until it left the concrete runway. At that time it ground looped and slid backwards about 10 feet and stopped in the grass.

I shut down the engine and climbed out of the aircraft. At that time I observed the tail of the aircraft on the ground and the tailwheel bent to the right side of the aircraft under the right elevator.
