Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Dent found on one tail rotor blade. Additional damage unknown this time.

MN DNR back pack damage, along with an iPad and hand held radio.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I arrived at the Hibbing Tanker Base at 0930 and conducted a load calculation. The Hibbing Tanker Base morning briefing was conducted at 1000. The MN DNR helicopter crew and I briefed on the planned proficiency at 1100 and I conducted a preflight at 1120. The flight began from the Hibbing airport at 1140.

During today's proficiency at the Carey Lake location we used the designated LZ where I've been to before. However the grass at the location was much taller than usual which made it difficult to find a level place to land. Although already a tricky location, typically there are flags to help find a specific spot to land, but the deteriorated flags were difficult to find in the tall grass. While going in to drop off the crew the first spot I landed was solid and felt level, I spooled down and let the crew out. The crew unloaded the 1 bladder bag, 2 combi tools and a manager pack, along with the bucket with long line.

We got set up and started our proficiency, everything went exceptionally well. I came back in to land the bucket in what I thought was the same spot as where we started. I saw the gear in the grass and knew I needed to keep a safe distance away. With the three crew members at my 1:00. I set the bucket down and started coiling the long line down and back. I had to back up a small amount to keep the line from resting under the skid. I started far to the right of the gear behind me. My first spot was too sloped, so I picked up and moved a little more to the left, no signals or indications from anyone in front of me so I set down. Again it was too sloped so I picked up to try again, no signals from anyone so I set down again but it was too sloped. The crew didn't signal anything so I picked up one more time and found a flat spot. The landing is on a hill with the tail up slope which puts the tail closer to the ground, especially when picking up.

Once I spooled down the MN DNR helicopter manager came to my door and showed me a piece of orange ribbon and informed me it hit the tail rotor. I thought it was the ribbon that was marking off the LZ so I told him it would be fine. He then came to my door a minute later and told me the iPad had hit the tail rotor. Then I understood the tail rotor hit something more serious. I shut the helicopter down to inspect the blades and tail area. After a thorough inspection by myself, utilizing my experience from my past commercial operator with the same make and model aircraft (including reviewing a picture of the tail rotor with dents on my previous aircraft), and having not felt any vibration or noticeable rpm change, I determined the aircraft to be safe for flight. The MN DNR crew agreed it would be safe to fly back to the tanker base. The flight landed at the Hibbing Tanker Base at 1249.
