Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft - Lower right side of float at chine bent.
Left wing outboard leading edge dented.

Vehicle - Upper edge of driver's side rear window scraped downward and across the driver's door window and broke off the mirror.

Sign - Broke turning lane sign on left hand side of road.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Upon arriving at the KSGS FBO early morning I logged into Skyvector.com multiple times to check the weather and found that there were no weather issues and the winds would be in my favor for a clear beautiful scenic return flight home. I checked in with Wipaire, where the aircraft just had the entire landing gear updated to check on the estimated time of completion and to pay my Invoice. They informren me that their regular people that do the log book entries were not available, but they had another person that could possibly have it finished before 12 noon. I returned to the FBO to relax and review my Garmin 530 flight plan and review the weather on Sky vector.

At 12:05 I observed my plane being towed to the ramp in front of Wipaire and noticed my water rudders were in the down position. As they unhooked the tow bar, I began to load the aircraft with my belongings and the replaced old parts in a box on my float. I then noticed inside the airplane that the gear hydraulic manual pump arm was still in the valve body, removed it and put the water rudders up. Upon exiting the aircraft I performed a visual inspection of the exterior of the plane checking tires, landing gear, propeller, engine cowl, tail, wings, fuel caps, ailerons, horizontal stabilizer, rudder, vertical tail, fuselage and checked the oil. Satisfied with my exterior Preflight, I entered the aircraft and proceeded to put on my seat belt and shoulder harness, then started the engine and calculated that my current fuel quantity shown on my fuel totalizer would permit the 1st leg of flight with over a 45 minute fuel reserve, so I did not need to refuel at this time. I brought up my fight plan in my Garmin 530, then started to taxi while listening to the KSGS AWOS on my way to the runup area.

I began my Pre-takeoff checklist procedure with my power check at 1800 RPM, magneto check, cycled the prop and checked the engine instruments. I visually proceded through the remaining departure checklist, added 10 degrees of flaps, adjusted rudder trim, rechecked engine gages, turned on transponder and confirmed radio on KSGS frequency. I made a radio call for my intentions for departure, approached the runway while looking for traffic on final and observing it was clear, I proceeded onto the runway and departed. I climbed to 2500 MSL and joined my intended heading for KPCZ Waupaca. Light turbulence was expected so I set up for a small rate climb to 3500 MSL and found smoother air.

I took photos along the way of the beautiful scenic farmlands and rivers below as I normally do to re-live the moments of flight. Shortly after taking my last photo, I experienced a slight engine hesitation so I changed my course to the nearest airport showing on my GPS. Moments later it did it again as I was looking at my fuel gages and my fuel totalizer showing 14.5 gallons. Confident that I had enough fuel I turned on the auxilliary fuel pump and the engine quit hesitating for about 15 seconds or more.

I still headed towards KSTE and began to look for an alternate possible landing area in a field, pasture, unpopulated area or roadway without traffic. I then realized I was loosing altitude to an estimated 3000 MSL so I set up for best glide by pitching up to lower my airspeed and adding 10 degrees of flaps once I obtained 85 kts. The engine once again hesitated and began to run rough. I adjusted my airspeed to see 70 kts. I felt at this point I had no other choice except to find a safe place to land the aircraft in one of multiple fields that I was sure I could make. Then the engine shut off completely and I relized there was a brown field next to the chosen green field and a road in between with heavy traffic coming towards me.

As I was switching my descent path to the brown field on my left, at about 700 AGL I noticed there was a right lane of the divided highway that had no cars and I could definately make the approach so I calmly changed my direction to land on this open lane and put my landing gear down. As I decended I felt this was my safest choice as I crossed over the busy left lanes of traffic and crossing the median to the empty northbound lanes. As I was about to touch down on the road safely I heard a loud bang and the aircraft veered slightly left before touching down on the road. As I was braking, I noticed I was headed to the right hand ditch area so I applied more left brake to keep from going off road through a ditch and into what looked like a line of Christmas trees. I also kept focused on a sign ahead that was on the right shoulder during my rollout, but missed seeing another sign on my left side which in turn impacted my left wing tip. After stopping and exiting the aircraft, a lady drove up to me about hitting her vehicle, assured me that she was not injured but needed to know if I was going to pay for the repairs to her vehicle, I assured her whatever the damages cost I would see to it that it would be taken care of. State & local police arrived took statements from people in the area, and helped me push the plane into a grassy area at a local furniture store. One of the officers knew the owner and received permission for me to park the aircraft there.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- 1) Proper use of a Preflight Checklist without distractions with full attention given to each item.
- 2) Service companies could red flag the customers aircraft yoke with a notice stating "Caution we may have repositioned your cockpit controls and switches" Remind yourself no matter what the situation is, if someone else besides you has been in your aircraft, double check everything on all checklists instead of assuming they didn't touch something that would not be normally be touched while servicing the aircraft.
- 3) Review Emergency procedures often, understand engine out symptoms and know how to quickly trouble shoot them.
