

Bradley Miller
Aviation Accident Investigator
AS-CEN

Date: July 30, 2025

Subject: CEN24FA212 - Witnesses Along Route of Flight

The following is a summary of the timeline of events, flight path data, and eyewitnesses who saw an airplane trailing white smoke near the time of the accident. Their locations on Google Earth showed them to be about a third of a mile or less from the flight path. See Figure 1.

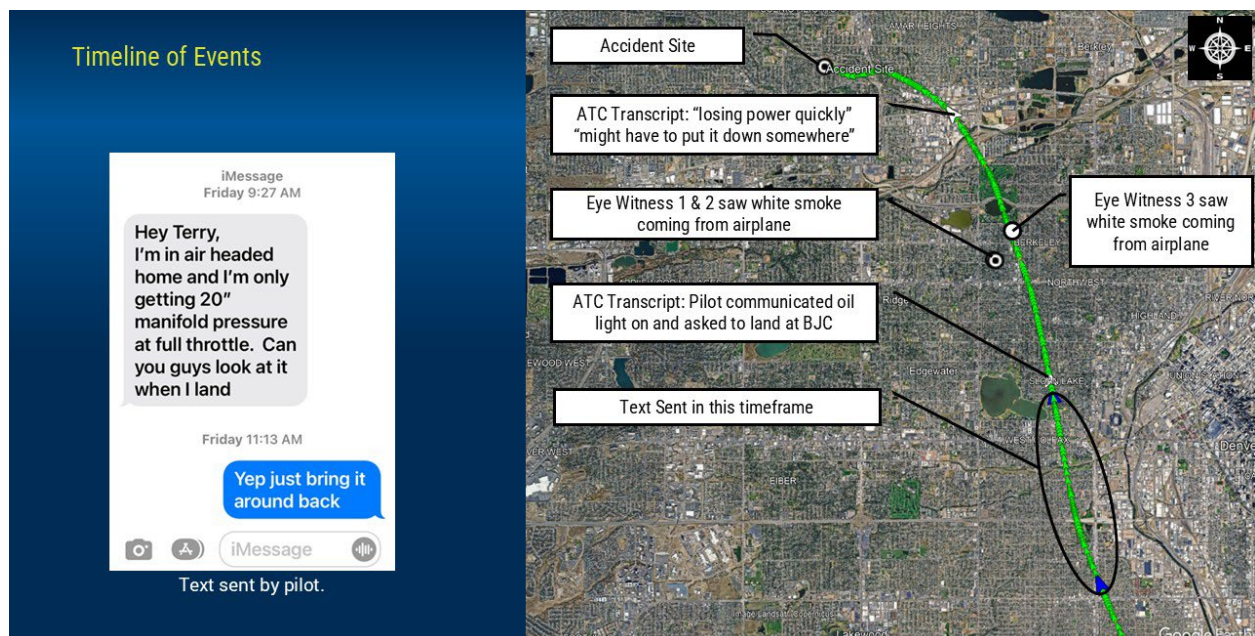

Figure 1. Timeline of events with witness locations included.

Hello,

This morning, I was in my house when I heard a plane that sounded louder than normal and "weird". My first thought was that it was a Piaggio P180 that occasionally overflies my house flying into and out of KBJC. I decided to step out my back door to see if it was the Piaggio, but realized it was a small low wing and that it was trailing smoke. The engine pitch sounded abnormal to me, still, while watching it. There is an aviation-themed brewery near my house that sponsors an acrobatic plane, so I thought it might have been that plane. The smoke was rather light and stopped as I watched it fly off. Upon googling the tail number realized it wasn't an acrobatic plane. I lost sight of the plane behind my neighbor's house and after that couldn't hear it, so I didn't know what direction it went. Given the beeline it was making in the direction of BJC, I didn't think anything of it until I saw headlines that it crashed later this afternoon. If you have any

questions, you can contact me at [REDACTED]

Sent from my iPad

To the NTSB

This is to report that I saw the aircraft that crashed this morning at Carr and Oberon, a few minutes before it crashed. It passed over my house at approximately 9.30 AM. I live in Northwest Denver.

I was alerted to its presence by a very loud high pitched continuous screaming/whining noise. Like a racing car engine revved up deep into the red zone. I was able to get outside in time to see it fly overhead. The silhouette I saw was typical of the small aircraft that I see flying daily in and out of the Rocky Mountain Metropolitan Airport ("BJC"), which is 10 miles northwest of my house. It wasn't flying very high (somewhat higher than Flight-for-Life flies, but not as high as it normally would have been if it was on a flight path to BJC), and I was able to clearly see a narrow stream of white smoke behind it. As it passed overhead, I could also briefly smell a chemical/rubber burning smell. The plane was heading in a N/NW path, I thought it

was headed to BJC. This was at approximately 9.30 am.

A few minutes later, I had a 'breaking news' popup on my computer, about a small aircraft that had crashed at Carr and Oberon, which is about halfway between my house and BJC.

I don't know if this information is of any use to you, but if so than I am glad to be of some help.

Many thanks,
Chris Allen

Subject: Witness Call: Arvada, CO. Beech 35 (N150WR), 6/2, IIC A. Lemishko

Call time 5 PM EDT.

Caller Pamela Ray

[REDACTED]
[REDACTED]

Caller states crash site is 5 miles northwest of her home.

At approximately 9:30 AM MDT A/C flew directly over caller's house while they were in the backyard between 1500 to 2000 Ft overhead.

Smoke was coming from right side of A/C and the engine was running rough with significant sound. Caller has no recordings of plane flying overhead.
