☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On June 11, 2024, about 2045 central daylight time, a Cessna 172R, N656MA was substantially damaged when it was involved in an accident near Gainesville, Texas. The flight instructor was fatally injured, and the student was seriously injured. The flight was operated under the provisions of Title 14 Code of Federal Regulations Part 141 as an instructional flight. Airport video surveillance showed a fuel truck fueling N656MA about 0625 on the day of the accident flight. Fuel records indicated that N656MA was filled with 32.4 gallons of fuel. Flight logs indicated that N656MA only flew once on June 11th, the accident flight. Airport surveillance video showed the flight instructor and student visually inspecting the fuel tanks on each wing during the preflight check at 1912. The airplane departed Denton Enterprise Airport (DTO) in Denton, Texas, about 1948. Automatic Dependent Surveillance – Broadcast (ADS-B) indicated that the instructor and student departed to the northwest of DTO, maneuvered, flew to Gainesville Municipal Airport (GLE) in Gainesville, Texas, and made multiple takeoffs and landings at GLE. The airplane impacted a grassy cow pasture about .5 miles northwest of the departure end of runway 36 at GLE. On the north end of the cow pasture, there were telephone wires about 35 ft above ground level. The left wingtip struck the ground first about 95 ft south of the telephone wires. There were shards of red plastic embedded in the dirt. About 32 ft south of the left wingtip impact location, the propeller, still attached at the flange, was found partially embedded in the dirt. One blade was buried about 8 inches deep, and the other blade was resting on the ground. A single propeller strike about 5 inches deep, preceded the propeller assembly. Lying next to the propeller was the starter gear ring. Lying about 18 ft south of the propeller, was the bottom part of the cowling. The main wreckage was found about 39 ft south of where the bottom part of the cowling was located.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Unclear at this time. We are working closely with the fuel pump manufacturer as a possible cause. US Aviation has also begun installing inflating seat belts via an STC for the C172.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Yes, we believe so but are unclear on exact details. Fuel pump seems likely
