Josh,

We were successful at downloading all the engine data and full flight data from the (**N602WR**) FAST box. As previously mentioned, since the FAST box did not have an active SIM card installed, the data was not being transmitted/uploaded to our server. In light of this, the box essentially “locked-up” with the memory completely full. It appears the last time the FAST box recorded data was in September of 2019.

That said, in our investigation(s), we typically download the raw data first, then make a copy of this raw data. This is in case the raw data were to get corrupted during the process to make this into readable data. If there’s any value in you having the raw data and the processed data from the 2017-2019 period that’s recorded, please let me know. I can send you this data together with the pictures from the investigation, and a copy of our chain of custody form. Just let me know.

In addition, please let me know what you want us to do with the FAST box? It appears to be in pretty good shape, so we could reassemble, run it through the Repair Station and put a yellow tag on it; if it passes automatic test equipment (“ATE”) criteria. There’s no charge for this service, however, if it fails ATE, that’s a different story. Plus please let me know where to send it, regardless of which path you plan to take.

Regards,

GO BEYOND
