These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**AERIAL APPLICATION**--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

**AERIAL OBSERVATION**--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

**AIR DROP**--Aerial operations, other than aerial application, that are intended to release items in flight.

**AIR RACE/SHOW**--Includes any flight operations conducted as part of an organized air race or public demonstration.

**BUSINESS**--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

**EXECUTIVE/CORPORATE**--Company flying with a paid, professional crew.

**FERRY**--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

**NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs:** Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

**Flight Crewmember Information:** Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

All of the aircraft's wheels got destroyed. The rear window of the aircraft was broken. Both wings got damaged, mainly the tips of the wings. The left wing took more damaged as it appears to be almost torn out of the body of the aircraft. I did have 10 degrees of flaps in, however I only see it displayed on the right wing. The propeller of the aircraft was also damaged bent and hooked in with the chainlink fence. The chainlink fence slowed the aircraft keeping it from going further out. The aircraft warped itself up with the chained fence.

The intention of the flight was to take my friend (Edgar Espino) for a joy ride. To have a fun quick 30 minute flight to the south looping back to the grand prairie municipal airport. The aircraft we were going to initially use was N3523R, however the aircraft got handed off to a student and their instructor for a flight lesson. We were then given the option to use aircraft N397ES as it just got off from being serviced from maintenance. They added a new engine part to it and was signed off by A&P IA Brain D'Forge, who knows more about the maintenance work done on N397ES. Based on flightaware we took off at 13:39 on 10/02/2023 from KGPM (Grand Prairie Municipal Airport). The aircraft performed well when going through the Run Up checklist. When checking idle, the engine did not give out on me. It was a clear day and we checked our weather from both Foreflight and KGPM ASOS. Again, my intention was to go on a fun short flight to the south of the airport in VFR conditions only and to head back to KGPM to a full stop. Everything was performing normal, takeoff was normal. The climb was normal. The cruise flight was normal. I believed I stayed at 2,500 ft. MSL throughout the whole cruise flight (away from Class Bravo airspace) before descending back to the airport. When coming in to the airport I descended down to 1,400 ft. MSL (as it is the standard traffic pattern altitude for this airport). I entered left downwind from the north dam and as I passed the threshold on runway 18 from KGPM I started my before landing checklist. I remember explaining to my passenger (Edgar) the steps of the before landing checklist. We both checked our seatbelts, then I told him about checking our fuel selector and that it has to be set to both, was already on both. Next step was making sure our mixture was pushed all the way in to rich, which it was. I then proceeded to tell him about lights being the next step. We have to have our landing light on, which it was on. The last two steps I went over with my passenger was to drop my RPMs to 1800 and put in 10 degrees of flaps in. This all happened on downwind after passing the threshold on runway 18. I realized that explaining these steps to my friend made us further away from the airport, I basically had extended my downwind a little more than the standard turn to base, which was at the softball fields. I then proceeded to turn the aircraft to base, at this moment I knew we were further out than usual and that the aircraft was at a lower altitude because of the extended downwind. I was not worried because I was trained to add a little power if the aircraft was too low when coming in to land. Anytime I descend, climb, or have the intent to land the aircraft, I was taught by the flight school that my hand must always stay on the throttle. At this point it was a habit to have my hand on the throttle the entire time when descending to land. As soon as I dropped my RPMs to 1800 my hand was on that throttle the whole time. During my turn on base there was two things I noticed. N397ES was a bit further out from the airport and our aircraft was too low, so my instinct was to add a little power. I then proceeded to add a little power by smoothly pushing in the throttle. This action caught me off guard because I did not hear the engine accelerate and the aircraft kept on descending. I had no response from the engine. No lift was happening. It was at this moment when I noticed that there was something off from all the standard normal landings I have experienced as a pilot. I did mention this to ATC, that I was experiencing engine problems. My next step was to add full power. Yet, I still got no response from the engine. The aircraft was continuing to descend and fast. I then checked my tachometer gauge and noticed that the needle was bouncing from 1000 to 1500 RPMs. At this moment I believe I was just below 1,000 ft MSL, leaving me with about 400 ft AGL of space left. I looked outside to my surroundings and decided that I was too far and too low to make it back safely to the airport. In my opinion, our best chance of survival was to find an open space over the metroplex to land the aircraft. This was a better option than chancing it by continuing my path on final to land at KGPM. I had to be sure of the safest outcome for us both and everyone else on the ground. The aircraft kept on descending and I knew I had no time to go over my emergency checklist properly. So, I then proceeded to pitched for best airspeed of 69 KIAS. Afterwards I started looking for a best place to safely land the aircraft within 30 degrees. My friend said he would also be helping me in looking for an open field as he has little experience in flying gliders. After setting up my VG speed as well as searching for the safest place to land that will cause the least amount of damage and away from people, I declared an emergency to ATC. While searching for the best place to land, I did consider to land on Park Row road. What made me steer away from that option was seeing the busy traffic. I wanted to stay away from people and buildings but my options were very limited being over the metroplex. As we kept on searching, by the grace of God, I saw a parking lot with a chain fence. **RECOMMENDATION (How could this accident/incident have been prevented?)**

## Operator/Owner Safety Recommendation

I strongly believe that if I would not have taken long to explain the steps of the before landing checklist to my friend, the aircraft would have been at a safe enough distance to glide over to the airport and land to a full stop with minimal to no damage. However I had no idea the plane would encounter a loss of power. I wanted to try more steps to try to recover the loss of power but I was too low to the ground to try anything, my best chances of survival was to quickly aim for best airspeed, best place to land, and communicate to ATC that I am going down.

**(NARRATIVE HISTORY OF FLIGHT)**

My thought process was to stay clear flying over the semi-trucks (which were also on the same parking lot). Then to touch down on the parking lot and to catch as much pavement area so that I can apply the brakes to slow down the aircraft, as well as lifting the nose to create drag before hitting the fence. I knew we were going to hit the fence and I would have rather had the chance to land in a wide and long enough space to avoid any damage to the aircraft and property but with the unfortunate circumstance we were faced with, it was nearly impossible to not hit anything. Most of what I saw was buildings, busy traffic on the roads, and not enough open spaces. I saw parking lots but with vehicles spread throughout. The best and most open field was the spot I landed on. If I was going to hit something, I wanted it to be an object that would not cause devastation or explosion to the aircraft or the surrounding area. I knew there was no escaping the chainlinked fence but my expectation was for the fence to help us reduce speed and hoping it would catch the plane and keep it from rolling to cause even more damage. This was my objective and thought process, however.

How it happened, I cleared the semi-trucks and I believe I hit both the pavement and fence about the same time. I did brace for impact putting on some unintended pressure on the yoke causing the right wing to dip instead of maintaining wings level. I remember seeing the fence as the aircraft collided with it. It all happened so fast but I do not remember being turned aggressively inside the aircraft but video shows just that, almost as if it got stuck forcing N397ES to maintain its place while stopping its roll out on the middle of the road. By the grace of God, the fence was able to catch the aircraft's spinning propeller to slow it and ultimately stopping the plane from rolling out, preventing any further damage. As we came to a complete stop, the first thing I did was check on my passenger. He confirmed he was okay. I then told him to exit as I started shutting everything off. I took off my seatbelt, I then turned off the avionics, all of the lights, and proceeded to cutting off the mixer as well as the throttle to idle. I turned my magnetos off and then my master switch off. I shut the fuel valve off realizing fuel was leaking from the aircraft. I quickly got off fearing the aircraft might explode. Both my friend and I were able to walk out of the aircraft alive as we waited for emergency services to arrive.
