Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

forward left half of skid tore off. tail boom and tail rotor seperated. main rotor blades damaged. sheet metal wrinkled. under nose of aircraft dented in and broken. firewall damaged in multiple areas.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 1230 I went to do some training procedures since we were slow with no business thus far. Prior to the first auto I verified all my pre-auto checks of carb heat full, lights out, gauges green, and plenty of fuel. I started the auto approximately 400 AGL. A few seconds after entry the oil pressure dropped to zero and the oil light came on. I immediately scanned through the gauges and saw the engine tachometer on zero; and realized the engine was dead. I tried rolling on throttle with no response. I continued the glide into the flare and landed unharmed. I began the flare approximately 30-40 feet AGL and leveled approximately 8-10 AGL. After leveling and contacting the ground I slid a short ways before the forward left skid hit uneven ground and spun the aircraft 90 degrees to the left and tearing off the forward part of the left skid. I think that when landing my energy was so low that the rotors drooped and hit the tail tearing the aft part off in several places. After impact I immediately turned off the fuel shutoff and mixture and turned the battery off, then exited the aircraft. I checked to verify no flames, oil leaks, or fuel leaks were present and when I determined it wasn't leaking, I immediately contacted my boss who then contacted authorities.
