Last Inspection Type

- ☐ 100-Hour ☐ Continuous Airworthiness
☐ AAIP ☐ Conditional Inspection
☒ Annual ☐ Unknown

Date Last Inspection: 09/21/2022
mm/dd/yyyy

Airframe Total Time: 1860 hrs

hours measured at (Select one)

- ☐ Last Inspection ☒ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
☐ Conditional (Amateur-built only)
☐ Manufacturer's Inspection Program
☐ Other Approved Inspection Program (AAIP)
☐ Continuous Airworthiness
☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
☒ Specify: Portable fire extinguisher in cabin

Propeller 1

- ☒ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: Harzell

Model: PHC-J3Y1F-1W

Propeller 2

- ☐ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: ACR Electronics Inc

Model or Part No.: ME406

TSO No.: ☒ OC91 (121.5 MHz) ☐ OC91a (121.5 MHz)
☐ OC126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☐ Yes ☒ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☐ No

If not activated:

- Indicate Reason: ☐ Impact Damage
☐ Fire Damage
☐ Battery Expired/Damaged
☐ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
☒ Airframe Parachute
☒ Angle of Attack Indicator
☒ Autopilot
☒ Data Recorder
☒ Electronic Flight Bag or Handheld Device
☒ Electronic Multifunction Display
☒ Electronic Primary Flight Display
☒ Handheld GPS
☐ Heads Up Display
☒ Onboard Weather
☒ Satellite Tracking Device
☒ Stall Warning System
☐ Video Recording Device
☐ Other, Specify: _____

OWNER/OPERATOR INFORMATION**Registered Aircraft Owner**Name: Averyation, LLCCity: St LouisFractional Ownership Aircraft: ☐ Yes ☒ NoState: MO ZIP: 63127Country: USA**Operator of Aircraft**☒ Same As Registered Owner☐ Same Address as Registered Owner

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing spar destroyed with about 1/3 of the entire wing removed and left main wheel pant damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

See attached titled Incident with N6JA

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. Properly announce I was having an Emergency to ATC
2. Ensure annual Inspection is Promptly Done.
3. Sump fuel to ensure no water.
4. Take a deep breath during emergency and know that I have the skills to land safely
5. Double check with ATC that the approach for the landing I am attempting is safe.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unkown what mechanically went wrong

Incident with N6JA

This is regarding to an emergency landing of November 6 Juliet alpha on October 15 2023. Around 0930 and 1000 I took off from the Omaha airport on an IFR flight plan at 7000 feet. Upon take off I was at 4000 and I was instructed to wait for 7000. I was given vectors when I got to 4000.

I was given instructions to climb to 7000, on the way to that around 5,000 I was in IMC and noticed moisture on my wings so I turned on my FIKI system noting there was no ice yet despite the outside air being around 27 degrees. I got to 7000 I was in the cloud and still in IMC conditions. I started noticing that I was getting ice on the front edge of my wings. I asked her traffic control for 9000 feet in an attempt to get out of the icing. They approved me for 9000 feet and when I got to 9000 I was above the clouds. I actually call them to Minneapolis center. And I told them that I had experienced icing between seven and 8000 feet and that the temperature outside was approximately I believe 26 degrees Fahrenheit.

About 20 to 30 seconds later I started noticing the plane was running rough. It was a vibration from the engine area of the airplane. I called Minneapolis center and told them that I needed to divert and they asked me if I wanted to go back to Omaha and I said initially Yes. However, at that time, my RPM gauge started to fluctuate between zero and 100 even though the engine sounded like it was still running. And my fuel gauge also started to fluctuate between zero and 16.5 gallons per hour. That's where I had my fuel set at 75% of the planes power. So when those additional items started to fluctuate, I told air traffic control that I needed to divert to the nearest airport. He suggested an airport called Red Oak and then told me that I was clear direct to red oak. He also instructed me to go down to 4000 and I slowly declined to 4000.

At that time I got a fuel, fuel sensor or fuel flow indication telling me there was a problem with the fuel flow. So I went from low boost to high boost. I also took the mixture from where I was lean of peak to normal 100% and started to descend, I asked for additional help on vectors. I had also gone to the nearest button on my avionics and hit nearest for red oak and then direct enter. And then I went to navigation mode on my autopilot. The air traffic controller at Minneapolis center asked me which approach I wanted to do. I was over I was tasked saturated so I told him that I would let him to decide I will take his advice on which was the best runway. He told me the RNAV for runway 5 was best. So I input RNAV for 05.

I indicated to him that I couldn't find the plate on my foreflight quick enough and if he could tell me what were the minimums for the barometric setting for minimums on the RNAV for 05. He told me I believe it was 1320 or something like that. So I input that I hit Load are activate. He cleared me direct to the initial approach fix INIHI and then I activated the approach at one point and hit direct to fly directly to the IAF.

He told me that I was off course I asked him if I was heading in the right direction. He said it's actually 180 degrees, the opposite direction and I did not want to do the procedural turn because I was having engine problems. So I began to hand fly the airplane because I no longer trusted the avionics. I was in and out of IMC and at one point I'd say I was probably 2000 feet 3000 feet. I could actually finally see the runway through broken clouds and I asked him for what was the MEA for the approach where I was at. He told me that I could go down to I think it was 2300 at the final approach fix so I was looking at the distance indicator on my avionics from there.

Prior to having the runway in site I had found the approach plate and got the CTAF loaded into my number 2 radio. I was monitoring Center on radio 1 when I started making call outs to Red Oak traffic on radio 2. I advised Red Oak traffic I was having engine problems was on final for runway 5 and I was landing on runway 5. I made two calls in total at this point on the CTAF. When I saw the runway through the broken clouds I notified ATC that that I had the field in site and which point I heard ATC say that runway 5/23 was closed and I needed to circle to land. In my head I thought "I'm on final, did he just tell me the runway he had me do an approach for is closed?" I didn't think there was another runway because I only saw the runway 5. My girlfriend named Lindsey Benoist was sitting quietly, and I asked her to look for the airport with me because we were kind of in and out of IMC I would estimate we were at 2500 ft. We both saw the airfield at the same time. We saw runway five I saw no indications that the runway was closed until we actually started landing.

At this point I had no confidence my engine would be able to do a go around and after reflecting on it, I also did not have confidence I could have circled to land. I had runway 5 in sight and it looked like my only option short of pulling my airframe parachute.

When I knew I could make the runway, we were at 50% flaps, we going approximately 120 knots on short final so I pulled Power to zero and tried to put in 100% flaps. When I put the flaps and all the way I got an indication that I had ice on my flaps. So, I gave it power and then put the flaps back up to 50% and then attempted to land the plane with 50% flaps which I know can be done very easily. I told my passenger that we were landing on runway and there was no chance we were going to do a go around. Again, I had no confidence my engine would continue.

As we were landing, we were still probably right at a little bit over 100 knots. When we were at the displace threshold, we noticed that there were some orange markings going across the runway horizontally. My passenger asked me what the orange lines were for, I said the runway is closed. I still never saw the yellow X that they had placed there only the orange sand bags placed on the X to hold it in place. Reflecting back I remember thinking it looked like a yellow box with orange horizontal lines.. There was no lighting on the X at all. Just these orange sandbags that's what we actually saw. When I saw the sandbags, we landed past the sandbags and I put the plane down and we bounced. I then held back pressure on the plane to try to keep it floating a little bit and then come down a little softer when we landed. I believe while floating I hit one of the barricades with my left wheel and then landed.

These barricades are approximately two feet in height with no lights on them going across the majority of the runway and I tried to avoid them by going to the left side of the barricades. It seemed like there

looked to be enough room for me to go around them and they were low enough they would not hit my wing. We tried to go around the second barricade because there was room and I was going slow enough but still probably 100 mph. I didn't know this at the time, but my left wing about three feet in had hit a bobcat skid steer that was parked alongside the runway and that caused my plane to veer to the left into the grass.

I can see that there were holes in the grass because there were piles of dirt. So I wanted to get away from the grass and back onto the runway and I applied medium to heavy brake pressure on the right brake in an attempt to get the plane to get back onto the runway, and that was successful. And were able to continue to slow and I was able to maneuver around a third set of barricades into the open area between runway five and runway 17. At that point, we were able to stop. I checked on my passenger Lindsay Benoist to make sure she was okay. She indicated that she wasn't hurt.

We were both happy to be on the ground and I continued to taxi down the runway, the closed one way to the taxiway and I went on to the taxiway and maneuvered for another a couple hundred feet and I at that point shut the plane down by turning off the fuel pump turned off the fuel mixture and shut the plane down.

Five minutes later someone from the airport approached in a truck and asked if we are okay. He was on the phone with Minneapolis Center and handed me the phone. I spoke with them and indicated we had no injuries and we needed no emergency vehicles. The only thing hurt was my pride and my airplane. We were then met by Kevin the airport manager who took my passenger and I to the FBO to drop off our personal belongings and then took me back out to the crash site to see what actually caused the loss of my wing. It was the bobcat skid steer sitting approximately 5 feet off the runway. I also observed the barricade I did make contact with knocked over and the light that was affixed to it about 50-100 feet away on the runway. I also saw the portions of the wing I had lost when I hit the bobcat along with some wires on the runway.

I have since filed a report using the NASA Aviation Safety Reporting System to identify the fact I had an incident and that as I have verbally informed both the FAA and the NTSB (as well as my insurance adjuster) I discovered my plane was 15 days out of annual inspection.
