

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Inboard and outboard gear door damage, right wingtip scuffed, horizontal stabilizer skin beer canned and underskin damaged, left elevator under skin damage and broken spar, tail tie down ground down and skin dented under the mount.

Right main gear actuator cracked under pressure (Cause of hydraulic failure)

A right main gear limit switch was broken in the gear vibration during landing.

No prop strike or sudden engine stoppage (engine was turned off once landing was assured)

No other property damage occurred

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

18 October 2023 N9597X Accident Account (Pilot)

On 18 October 2023, I decided to make a short flight for recreational purposes, with an expected flight time of half an hour in the local area east of KPUB. I checked the weather using the Foreflight app on my EFB device, performed a walk around IAW the checklist, and headed out to the runway, communicating with the appropriate agencies via two-way radio communication. I was given takeoff clearance for a mid-field takeoff on runway 8R at the A2 intersection. I proceeded with a normal takeoff with full power and 10 degrees of flaps.

Once I was airborne, confirmed two positive rates of climb, and had proceeded far enough down the runway that I could no longer make an emergency landing, I reached for the gear handle and placed it in the up position. The gear doors opened, the gear legs retracted, and the doors closed normally. However, at the end of the gear cycle, there was a loud "pop" in the cockpit coming from under the rear passenger area, and the gear handle did not return to the normal center detent. I immediately looked at the hydraulic reservoir sight gauge, suspecting I had blown a hydraulic hose. A bubble of air was already in the top of the sight gauge. I continued my climb out to the East while trying to cycle the gear back to the down position. I placed the gear handle in the down position, but nothing happened. I cycled the gear in each direction several times without gear door or leg movement. I decided to use the emergency gear extension handle. With the gear handle down, I was able to pump the gear doors open. The nose and main gear fell out of the doors. However, only the nose gear fell into a normal position due to airflow. The mains dangled in the airstream, and the hand pump now lacked the fluid to push the legs into the locking position. I was concerned that my flaps would also lose the ability to deploy further down because they are also hydraulic, so once leveled out at an altitude of 10,500' MSL and slowed below 110mph, I hand-pumped in 40 degrees of flaps.

I was now out of KPUB's airspace and above most of the local traffic's altitude, so I turned back to the southwest to troubleshoot south of KPUB. I pulled out the checklist in my POH. I followed the emergency procedures for an unsafe gear indication. I tried various slow-flight maneuvers to try to get the gear to lower without success. I only had the small wing mirror to view the landing gear, but I was confident the nose gear was in position, the mains were hanging behind their locked position, and all gear doors were hanging open. I had no green or red gear lights in the cockpit and no way to know if the nose gear was locked in position, even though it looked like it visually. The hand pump had zero effect on bringing the mains forward, but it was attempted several more times throughout the flight. The hydraulic sight gauge showed a level around the bottom third of the window, which confirmed the suspected fluid loss.

At this point, I devised a plan to burn down fuel for three hours for multiple reasons. First, I wanted to get the aircraft as light as possible for an unsafe gear situation and reduce the fire risk if a fuel bladder ruptured upon impact. Second, KPUB is an extremely busy airport with several local sorties flown by Air Force training aircraft. I knew they would be landing around 17:00 local, and I could then close the main runway without causing them to divert. I would have about two hours of fuel remaining at 17:30, leaving me the option to find another airport if KPUB suddenly became unusable for another reason (another emergency). I also did not want to go past 17:30 local because of the sun setting behind the mountains and nighttime complicating my approach. So, I contacted KPUB tower on 119.1 and declared an emergency. The proper information was exchanged, and I waited for a lull in the normal radio traffic to further coordinate my plan with the tower.

I explained to the tower that I would circle high above the field, burning down fuel until 17:00 local, when I would do a low approach to get them to confirm everything I saw through the wing mirror. If they saw the same thing, I would climb back up and then execute a VFR pattern to runway 8R with an extended base leg and final approach. I asked to have fire rescue in place. The tower agreed and began coordinating the emergency plan.

While circling at 10,500' MSL above Pueblo, I used my cellphone to call an extremely knowledgeable mechanic about my aircraft. This was the only possible deviation I made from FCC regulation. We discussed my situation and all the emergency procedures. He agreed with my diagnosis of hydraulic failure and my emergency plan. I monitored 119.1 throughout the entire conversation and always maintained positive control of the aircraft.

I asked the tower to confirm that the USAF trainers would be done flying by 17:30 local, and they confirmed that was true. At 17:00 local, I performed a low approach, and the tower confirmed my mains were not locked, but my nose gear did look like it was in the correct position. I climbed out, but because of my configuration, I could only gain about 100' per minute, so I asked to turn out of the pattern to the south to climb back up. My plan was approved and executed.

(Continued below)

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I knew this was a common problem for this model of aircraft. I had prepared myself for this to happen someday. After researching it further, this is happening more and more on these older Cessnas. I recommend a timed inspection using dye penetrant to identify impending failure of the gear actuators. Something done annually, 100 hours or 500 hours. Part replacement is not easy to come by. I'm not sure new ones are produced anymore, and when they were the costs were astronomical (over \$5000). A used part from the salvage yard is \$500.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Right Gear Main Actuator

1280501-2

It cracked at the top of the barrel near the cap threads, under hydraulic pressure, after gear retraction, but before limiting switch reached max pressure.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

Both doors were opened on final approach. After aircraft came to a stop, pilot exited under the left wing and walked clear of the runway to the northeast. The pilot was the sole occupant.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)
